

Outline

1- Introduction

- 2- Psychology and dynamics behind Artificial Intelligence emerging power lies in cognition to technology

- 2.1- Artificial Intelligence has created convenient global village but also send humanity to dark side

- 2.2- Artificial Intelligence will give power of divergent views

- 3- Effects of Artificial Intelligence as double edged sword

3.1- Current Scenerio of Artificial Intelligence

3.2- There is need to adress future challenges of Artificial Intelligence power

4- Case Study of USA

4.1 Pakistan Can follow American Strategies

4.2- Way forwards

5- conclusion

Artificial Intelligence augments human intelligence with rich analytics and pattern recognition prediction capabilities to improve the quality effectiveness and creativity of employee decision. It can also automate complex process and minimize downtime by predicting maintenance needs.

"Artificial Intelligence could be considered partial intelligence". It slowly fixing its roots all over the world. As the Australian government have taken almost 943 Artificial Intelligence startups "Harrison", a giver of multiple domestic analysis "Canva" which nurture graphic designing etc. On other hand South Korea leads the world in robot density. South Korea's robot density is seven times higher than the globe average. In most of the countries including Pakistan Artificial Intelligence have progressed a lot in many aspects of different fields. AI is blessing for health sector in Pakistan, in addition to, Artificial Intelligence is taking up more space in education system of Pakistan.

Day: _____

Date: _____

as government is taking initiative for schools to describe 3D visuals with 3D models. Artificial intelligence acts as a double edged sword. It has exposed strengths with vulnerabilities. However, pragmatic measures are needed.
