

Education is not a destination, it is a journey that never ends.

(1) Introduction

(i) Education is a shining future of any society, a community and a country.

(2) Education is a journey: A
bright overview.

(3) Education is not a destination,
but a journey

(3.1) It raises the bright future of a country.

(3.2) Makes aware of growing innovation in science and technology

(3.3) Develops intellectual growth in human beings.

(3.4) Helps in analyzing the global politics.

(3.5) learns the morality and obligations given by religion.

(3.4) leads a path to prosperity in the world.

(3.5) provides a hope of survival in the competitive society

(3.6) Alters the rule of dictatorship into democracy

(3.7) promotes justice and rule of law

(3.8) Builds a voice for the voiceless.

(3.9) develops the rational thinking analysis.

(3.10) keeps alive the values of

civilization and culture.

(4) Hurdles in the journey of education that may impede this progress.

(4.1) Increases the concept of discrimination and prejudiced thinking

(4.2) Grows the values of elitism in a society and country

(4.3) Suppresses the rule of law and equality

(4.4) Upholds the low-socio-economic cycle.

(5) pragmatic measures must uphold the journey of education, keeping persisted.

(6) Conclusion.

^{ee} In the 21st century, there is one thing that is an education which touched the sky and shines the earth by its values, morality and rationale. ²² Kofi Annan. Undoubtedly, education is not a destination; it is a journey that is unending. It seizes the bright future of an individual, society and country; it makes aware of growing innovations in science and technology. To add to it, education develops an intellectual growth in human being, and helps in analyzing the global politics and economy. It also teaches about morality, ethics and obligations provided by a religion. Education leads the human beings the right path to prosperity and development in the world and provides a hope to survival in a competitive society. Furthermore, education deters the rule of dictatorship into the spirit of democracy and also

promotes justice and rule of law in a country. It builds a voice of the voiceless; it develops the rational and critical thinking analysis; and, it keeps alive the values of civilization and culture. However, in this journey, many hurdles ~~also~~ that impede the progress of education are discrimination and prejudiced mentality in a society and growing the biased legislations and suppressing the true of law and equality as well.

Thus, by applying pragmatic measures, this education and journey would be persisting in the world.

To start with, indeed, education is not a destination; it is a journey that never ends at any cost. Education is only hope for the human beings in the globe that changes the destination of the billions. There is no denying the fact that every religions, holy books, institutions, organizations and even global powers' agenda

are
~~is~~ to promote the education.
Without a true spirit of education,
there is no purpose of any
entity to live or survive in
the world. Therefore, it is ^{an} unending
journey that always keep going.

Education raises a bright
future of a country. Education
is only source of progress and
development for a country. For
instance, the global north is
constantly paying its heed on
growth of education. They know
the importance of education. In the
western country, the literacy rate
is around 98% which reflects
that education is being prioritized
at any institutions, by the
west-education agenda. It is the
sole path to growth and prosperity
in the world.

Education makes aware of
growing innovations in science
and technology to the human
beings. In the current era of

development, science and technology are sharply progressing in the world. However, their growth and progress ultimately links to the education. Without education, nothing is important in science and technology; this relation with education is the most important aspect. Scientists, innovators, and experts and their existence are because of education.

Education develops an intellectual growth in the human beings. It is the reality that human beings are developing in the literacy, intellectual debates, book-reading, competition, writing competition and research-tendency. All these increasing developments in the distinct fields and disciplines, it is due to education that generates creativity in the mind of human beings, as they survive their lives in accordance with the world's growing competition. So, education is a

journey that never ends.

Moreover, Education also helps in analyzing the global politics and economies. It is only education that enhances the sense of rational analysis in the human being to help understand the global politics and economy. Whatever happening in the global is directly affecting the living standard of people across the world. What kind of economic model is pursued and adopted by a state or global institutions; It is an education assists a human being to sustain the thinking process, analyzing the global order.

It teaches the morality and obligations given by the religion in that world. Education is a long journey that teaches many steps, but the most important thing is the religious morality

and obligations. Education is a tool of learning about whatever religion says and guides. For instance, Holy prophet (PBUH) says, "Education is obligatory over man and women. It guides you to the true message of Allah." It proves that education is a journey.

Education, as a journey, leads a path to prosperity in the world. World is under the distinct conflicts, wars and clashes, but there is only education that paves a way to prosperity to solve the conflicts in world. "Education is a leading path where there is a solution of any problem provided that is is requested for" - Nelson Mandela. It opens a door of opportunities for all the human being to pursue this path and go with the prosperity in the world.

Additionally, education carries out a hope of survival in the competitive society. Hope of survival is the ~~purpose~~^{destination} of any person, society or country. Globe suffers from the sharply growing competitions in world in terms of employment, skills and technological expertise. Education manipulates the opportunity and opens a door of new skill that gives a chance of survive. Hope for survive depends on pursuing of education in the era of competition.

Mostly important, education alters the rule of dictatorship into spirit of democracy. Since 19th century, the rule of dictatorship has constantly prevailing in the world, but the rise of education challenges this values. It brings values of democracy where every one can participate and opinions can be prioritized. Democracy is the model of equality.

participation and inclusiveness, whereas dictatorship is a man power. Therefore, education advocates the majority participation.

The tendency of justice and rule of law are included to prevailing of education. In any society, justice and rule of law play a game changing role in order to behold the sustainability and development in society. It is an education which is responsible, to carry out justice is equal for and rule of law is balanced in sight of the rich and poor. Both pillars rely on the proper implementation of education in a society, country and globe.

Education is a voice of the voiceless in the oppressed world. According to John-F. Kennedy, "Education is the name of voice, language, weapon, ink and power that is used against the immorality

Oppression and war" Many wars and clashes have been figured out by applying the sense of education. It always raises the voice in favour of those who are deprived of this blessing in the oppressed world.

Education upgrades the rational thinking analysis in the era of technological development. Mostly people are lacking their critical analysis because they do not pursue the journey of education. Education is replete with self-thinking power and compels everyone to build own argument rather than to follow the published ideas. It creates the chance of rational thinking analysis in any problem or task. The Western education system adopts the critical analysis tendency. Therefore, education is the way of rational analysis.

Education persists the civilizational and cultural values in the world. There are many civilizations and cultural values that have been wiped out from the world and some of them still exist because of education. Indian civilization, Islamic civilization and West civilization are under the approach of education. This is the journey of education that puts their knowledgeable stuff before human beings. Cultural values are also supposed to be alive owing to the spirit of education.

Increasing the concept of discrimination and prejudiced thinking challenge the journey of education. World is full of this kind of behaviour that diminishes the value of education from the world. Discrimination and prejudiced mentality demoralizes the spirit and journey of education. For instance, this discrim-

ination and prejudiced bring about the impediments in the way of education for the human being. Madiha Buzal. This attitude and mentality is the cause of the low standard of education.

Another challenge is to be growing the tendency of dictatorship, autocratic and dynastic politics on way to education journey. In the era of 21st century, especially in terms of governmental politics, the rule of dictatorship and dynastic politics is at peak in the many country. For instance, in the middle eastern countries, there are values of kingdom, monarchies and autocratic politics that have prevailing for a long period. Therefore, education journey suffers the impediments

suppressing the rule of law and equality in a society

are another challenges to the journey of education. Most countries overlook rule of law and equality that education tells about law and equality are the two front doors of prosperity and peace in the world. Education faces the suppressing rule of law and equality. For instance, Pakistan is the first example in this regard ~~that~~ where equality in education is a limited at the constitution. No one is keen to bring education at the right journey for the people.

Low socio-economic cycle in a society is another imbraglio for Pakistan. Millions of people are unable to access education because of their low-socio-economic condition. Especially in muslim countries, there is 49% literacy rate that exist in the world. Due to low socio-economic condition, they are deprived of the quality

of education. This level of condition play a crucial role in the low standard of education.

Education, indeed, is not a destination; it is a journey. For bringing this journey to its end, there is a need to be reformed. Education should be kept the priority and important building block for improving standard of people. Equality and equity in terms of education play a very imperative role in order to sustain the journey of education smoothly. Modernized the education system is also important stance to fulfill the standard of education for the people. Moreover, proper budget and technological advancement upgrade the quality of education. Hence, these suggestions are striking to improve the education.

In conclusion, there ^{is} no

fact that education is a blessing that never ends at any cost. It brings the change in society time to time and creates the capacity building of knowledge in the human mind. To add to it, it promotes justice, prosperity rule of law and builds a voice of the voiceless. Education develops human intellectual growth and keeps the values of culture and civilization. It enhances the human evolution and progress in a society and grows the understanding about the global politics and economy. Furthermore, Education gives rise to awareness of about ~~the~~ innovation and development in science and technology. Nevertheless, some challenges also diminish the role of education, going journey in the world, lack of the proper implementation ^{the rule of} law and equal representations.
