Title: Hot vs Cold Climate. Effects

Human nature and behaviour changes with variation in climate in which he/she lives. Every climate is peculiar for human beings in its own sense. In cold climate, man has to put extra efforts to sustain life. He has to arrange for shelter, clothes and food. Contrary to this, in hot weather, life is relatively easy as there is small need of shelter and clothes and the quantity of food may readily be available. In short, Human beings take life easy in hot weather while they have to put extra efforts in cold climate.
