

Easy Assignment

Name: Muhammad Khan COB-7

Topic: Climate change in Pakistan
causes and consequence.

Brian Storming

causes:

Forest cutting

Industrial pollution

Green house gases

due to damage of ozone layer
consequence

1. out season rain

1. Flood Glacier

Glacier melting

economy loss

diseases

poverty increase

increase in temperature

Outline

1- Introduction

2- Forest cutting

3- Green house gases

4- Due to damage of ozone layer

5- Flood

5.1 - out season rain

6 - disease effect human health

7 - poverty increase

8 - increase in temperature

8.1 - Glacier melting

9 - conclusion

1- Introduction

Guy Micherson says, if you really think that environment is less important than the economy, try holding your breath while counting your money. Climate change is a threat to world development and specially developing countries, Pakistan is also on the front line of climate change and faces serious issues in form of flood, out season rain, glaciers melting, loss of economy, internal displacement, loss of lives and diseases effect on human life, and increase temperature, and behind these issues and the role behind these issues / climate change is forest cutting, industrial pollution, Green house gases and damage of ozone layer. To address the climate changes the world need to stand at single plate form specially develop countries like China (largest Green house gas producer, Indonesia (contribute 21% in climate change) and America (contribute 19% in climate change). Barack Obama said "We are the first generation

To feel the impact of climate change and the last generation that can do something about it."
