Species struggling for ~~the~~ survival.

"Plastic will be the main ingredient of all our generations" Anthony T. Hinkle. To live on earth smoothly ^{every} peacefully is a ~~not~~ natural right of each creature that exists on it. Unfortunately, billion of species are at risk in oceans, owing to the ^{waste} a billion of plastic that is produced and thrown ~~by~~ land ~~resome~~ globally. Moreover, due to plastic waste over 1 million seabirds and 1 lac mammals die each year, ^{which} ~~then~~ depicts that how ~~gravelly~~ gravely they are being affected by human induced actions. Furthermore, plastic pollution ~~not~~ ^{disturbs} ~~disturb~~ sea life but also ~~it~~ ^{poses} ~~can pose~~ a serious threat to the eco-system which may ^{result} ~~results~~ into cyclones, floods and many more disasters. It has been projected that by 2050 there could be more plastic than fish in the oceans by weight. However, plastic being ^{non-}degradable in its composition may take thousands of years to decompose. As a result, nations which are serious for the marine life and for their survival need to add more percent into global plastic recycle which is approximately 9% only, for the survival and prosperity ~~of~~ of our future on this planet.
