- 2.
- 5- Government interventions is a necessary tool for perfect utilization
- a- imparting practical education e.g. Japan
  - b- ~~providing~~ <sup>ensuring</sup> security & basic needs and social
  - c- vocational institutes e.g. Tarta
  - d- proper counselling of young minds

6- Conclusion

Women always have space for new clothes because their cupboards are well-managed. They exactly know where to place things to avoid mess.

The utilization of youth is synonymous to the women's ability to manage cupboards. If things are subtle in proper way, new things can also fit in. China is the most populated country and its growth is a big example for populated countries.

to utilize their youth in production sector to strengthen economy. Similarly, South Korea has used young minds to create innovation and has successfully made the 3rd currency. Retrospectively, India was also tiptoeing but its focus on IT sector has given it an immense amount of growth. Thus, huge population can help a country to grow, militarily, economically, technically and politically. Yet, other side of the coin is that not every country has much skills and resources to manage a large number of population. Basically, their bases have not received the exposure and taste of improvement. Conservatism and stasis influences are the biggest hurdles for a country to achieve its maximum potential. However, things cannot happen on their own. A dire need of government's direct intervention is compulsory for utilizing a large population. Firstly, the grass root level is needed to be strengthened because stronger the base, fortified the building is. Indeed, utilization of

large population is tricky but  
once done, it can have multiple  
gains. The benefits can be domestic  
to international levels. Therefore,  
government has to step in to  
make country bloom.
