6).	conclusion
<del>/</del>	

	Good start of of paragraph &
	Dawn of 21st contury has inchnessed
	that technology is a porce multiplier for the world.
	since Last decade, AI has been working to revolutionize
	the world. Interioral intelligence is covering its
	targets with a smooth and fast or pace because
	the world is ever evolving, what is new today shall
	be old tomorrow. AT has proved through unprecedented
<b>`</b>	developments that it is going to bring a new era
	of prosperctly to the world today, AI is present-
-	in almost every field. Recent developments in
	the mistals of commerciation approximation technology
	agriculture, spra, alexation, politics, and health
-	are showing that the priore well be of AI. However,
-	Some recorders believe that AI às a pandora
	box of terrifying puture, and it will make
	humans as a slave of machines. They prove
	that AI has created unemplayment, privacy
	concerns, Language barreers, and digital warpare.
ر ر	Actually, AI developments have negated their
ر	concerns because as per the studies of WHO,
ノ	WEF, and NASA, humans are using AI technology
	overwhelmingly, and their results are positive.
	According to their reports, AT is a source of

creation of jobs, protection against privacy and
read accidents, and language translators which
endorse the concool of prosperity in the world.
through AI technology.
Aviete and chichigence is the
imitation of human intelligence in machines in
order to make them able to thenk understand,
and perform basks like humans. The word Artificial
intelligence (AI) was coined by John McCarthy
in 1956. AI is a modern technology that inculcates
machines to perform human cognitive abilities
like learning, reasoning, and problem solving. There
are the main types of AI hased on the capabilities
of machines. One type is weak or marrow MI,
in which machines are designed to perform,
limited or specified task only into their dampons.
Examples of weak AI are voice assistants facial
recognition, and google mans). Other type of AI
is known as swang or general AI, in which
human entelligence ès enduced ento manches
in order to make able to understand and perform
human considere abélitées. They In this type,
machines are not timited or specific in

J			

	//
	their domains. Bramples of general AI are vobols
	and satellite technology).
	To begin with, AI has modernized
	the communication system. AT has introduced Natural
1	learning Processing (N.P) system in which certain
$\parallel$	voice assistants like Site and Alexa through AI
	algorithms understand and interpret human Language
	easily. NLP technology is used overwhelmingly in the
	communication system of Us in order to give commands
	to the graphe soice assistants, and voice assistants catch
	the commands ammediately after processing they give
	outputs of the commands. Similarly, self-driving cars
	have also created peasibility in the communication
	system. Self-driving cars work on the AI algorithms
	and travel without commands and emtrals of divier.
9	Style of writing and criculating
	co order to prevent from road accidents that are
	caused by humans. Hence, NLP and self-diviving cars
	are méracle of si és communication system.
$\dashv$	Additionally, AI has advanced the
1	information technology (IT) system of the world.
1	Creation of robots and biometric machines is
	unmatched. Robots are invention of AT based

technology, which work, understand and perform
task like humans. In South Korea, the demand:
of robots has been increased because robots are
used in industries, markets, and heath centers.
Sousil and Linear of the proper invite machines are
Samilarly, beametric or tenger: print machines are also used in the world to control crime. INTERPOL.
mort profice is personal in beneficial from

IT and telecommunication organizations have
implemented AI based technology. Thus, IT is
flourishing day by day due to AI based technologies
Moreover, AI has augmented the glabal
economy. As per the report of Pricewaterhouse Coopers
- (PWc) At well contribute \$15-77 to Jabout economy
by rose AI through its innovations of a singificant!
- the trend of virture ouscness platforms. It has
digitalized the markets. These platforms are
ease source of buy and sell the products inline.
online platforms like Binance, Forex, mazon,
and Alibaba have been working to strengthen
global economy Trèse online bosiness applications
Bave enhanced the importance of online lousiness.

1	//_:&t
`	Meneralive AI is used in various industries:
`_	like textèle, transportation, and online shops to
`_	boost online business and economy of the world.
`_	Ergo, AI has benefeted the glabal economy.
`_	Next to it, AI works effectively in
`	the field of agriculture. Use of AI in agricultural
	system is growing day by day. Stakeholders are trking
	assistance proin AT algorithms to enhance crop productivity.
	All has empowered farmers to track to crop progress
	over the entire crop excle. It assists parmers from
	sowing to howesting. At based volute and markines
	are used for owing and harvesting of crops. Interestingly,
	India is using AT based satellites and data based
	algorithms in the field of agriculture to store
	data regarding Lands and crops before sowing Data
	helps them regarding soil type, moisture, and salinity
	in the fields. At facilitates the aptemization of
	tellar and criegation in the prolds. Therepare, AT
,	augments the agrecultural productivity.
	Besides it-, AI is also harking to control
	en climate change activities. AT has ability to
	forecast weather patients and magnificate of
	earthquakes and disasters. As per the report of
	The second of th

\_1\_1\_3+ European Space Agency, AI has ability to capture the images of melling of cabergs and it does 10,000 paster than human could do it. This helps scientists to understand bow ice beings release into oceans. Countries like Japan and Brazil are utilizing AI technology to predulweather patterns and intensity of starms in order to take precontionary measures against climate change - AI encourages dean energy and reforestation to control climatic activities. So, AI algorithms are useful tools to control climate change activities Transition of ideas withingsent in The sporar tendricina Ciscontinue like USA, Russia, china, and Uk are taking assistance from AI for space research activities. They use AI algorithms to explore planels, galaxies, and navigation system. larghen end national axe appearation has national a new era of efficiency, conovation, and discovery. As per NASA's report, currently, 2926 satellites are working in space in order to analyze terrain, plain rootes, and obstacles in space. Their work is inclusive, which will assist navigation and communication system.

1	
	As a result, AI contributes substantially to assist
	space research technology.
	Sémélarly, developments in education
	is also a miracle of AI technology. Chalipt is
	a great innovation of AI technology, which provides
	easy access to the students to learn and collect
	their ocademic content. It assists students to solve
	goingnenty North regentations are the Nothernander
	Cambridge University, almost 47-3% students
	use AI technology for assignments and homework
	in UK. Along with this, AI has created online
_	educational applications like MS Team and zoom TV.
_	which help teachers and students to remain attached
	with online leabures and tutorials. It enhances the
	abilities of teachers and students. As per lie report
	of PWc, AI based education market is predicted
	to reach \$20B by 2027. Consequently, AI works
\\/	Mrebellez redrection systemin the world.
/ <del></del>	In addition to this, AI has transported
	No political system of the world. AI has generated
	electronic voting machines (EVMs) for ead conducting
	free and pair elections. EVHs have controlled
1	régging apportunitées - Today, online political
	Many deportations rearrant arrangements

movements hold in the world-AI based algorithms
are operating in decision making and policy
prmulation by the politicians. A worker can easily
listens to his they leader through ordine powershows.
This advancement has created easiness for
citizens to remain familiar with palitics. It has
removed the distance concerned and brought
all citizens of a ration on single platforms. EVMs
and online political movements are used effectively
in Australia and Estonia. To cot on start, political
System has henorical from AI based algorithms.
Lossinos least, As has revolutionized
the health system of the world. AT based technicary
is utilized to diagnose harmful diseases, treatment
of patients, x rays and ultrasounds, and operation
AT solves sover of patients related to the disease
like anser, tubercloses, diabetes, and heart problems
AI based robots takes care of ill patients in
The hospitals. Similarly, doctors do surgeries
and operations through AI based algorithms.
Canada às one of the leading countries on
The world, which is using AI technology
in bulk quantity in its health system. In brief,

health system of the world is becoming beller	
day by day dase to AI technology.	
In above paragraphs, it is clearly	
discussed that how AI is going to bring a new	
era of prosperity on the world. Mow, it is perfo	erk
to shade a light on the only theses arguments	
which are discussed below.	
Firstly, some analysts argue that	
BI és a pandara box for terrétyéng pubure	
because its concerns regarding privacy are	
enhancing speedy They believe that the Cambric	ge
Analylica took place in 2013 due to AI based	
technology. They say that Living cambridge	
analytica AI based technology was used in	
manipulation of social accounts of people-It	
was clear managestation that AI will bring	
privacy concerns and attack profices of	
people. According to them same idea of nieus	وماع
public accounts was believed the Brexet. Hence	
they consider. AI cor a took to attack privac	
Secondly, AT has created	<u> </u>
unemployment. They argue that robots have	
replaced manpoler; self dréving cars have	

	increased rates of accidents. They quote
	statistics of the world Economic From (WEF),
	AT could replace 854 workporce by 2025.
,	They are of the view that rise of AI will
	pose threats to developing countries, and
-	it will enhance unemployment, poverty, and
	cinflation. Thus, rise of AI technology is a
11	great threat to labour-porce on the world.
	Therely, AI has pul limetalians
	on human cagnitive abilities. It has made humans
	as: a slave of maliones. Humans are working
	-lonal lone emittagelle IA no lettrabaged-vavo
	use their cagnitive abilities. It means, AI és
	a death of creativity. They argue that humans
	are not commanding to the machines, but
	machines are commanding and controlling
	humans Humans have become passive; Hey
·	Loral use their rational manager of municipality
	reasoning abilities. According to Stephen Hawking
	"The development of full AI could
	spell the and of the human race? Ergo,
	AT is a dangerous took to half human
	cognétère abêlitées.
	COSUCTOR COCCULOR

	1
Foorthly, AI could cause digital	
warpare. They arose that race of weaponization	od .
is enhancing day by day-Countries are making	
conventional as well as nuclear weapons using	
AI algorithms. Similary hackers are pabricaling	
deepstakes and cybercième allacks for social	
engéneuring. These Weaponization and cybercrime	
liveatering the civilian population of the world.	,
They believe that AI based technology used to	
infillable in the torritory and to harm the	
sovereignisty of other countries. Recently in 2023,	•
a summet held in Metherland, in which 60	
countries out of 30 agreed to use 11 technology	
in battlepield. Therefore, rise of AI could	,
prong digital margare on the world:	
Lastly, they say that there are	
many language hurdles for AI. Nearly 17,000	
Languages are spoken in the world, and	
diversity of language is a challenge for AI.	
According to them: languager is a fundamental	
source of communication, il. is not easy.	
and possible par AI to understand and	
contempret the diverse Languages. They believe	

	(16)
	that AI could not be able to translate
_	all languages and also sould not break
-	larguage borriers. Multi-cultural larguages are
	conficing AT based algorithms. So, Language is
	an impediment for rise of AI in the world.
-	Plz try to have ment reclimans months
-	or anti-thesis are discribed. Now, it is imperative
	to discuss rebullal to the counter orguments in
_	porthcoming paragraphs in order to prove the
-	stance that AI is joing to bring a new eva
-	of prosperity in the world.
_	Unquestionably; ricse of AI is
-	not a threat to manpower, but it is a source
	of creation of jobs in the world. As per the
-	report of World Fronomic Forom (WEF), HI will
-	create 974 jobs by 2025. It means, if 854
	labour-joice displace then at the same time
	creation of jobs = 97M. So, 12M obs ene produced
	executing more than replacement. Similarly,
	according to Varal Noah Have on his book
	21st lessons for 21st century writes that
	there are 30 people required for the maintains
	and operation of American Reoper (drone). It

/	
means possibility of creation of jobs by AI	
is more than that of loss of jobs. Hence, it	
in proved that AI is a source of enhancing	
employment rations	
Indeed, il- is no denying that AI	
has cortied the prevacy concerns because himetric	
machines and facial recognition machines are using	
overwhelmingly to control cyber altacks china	
has modernized its cyber-security control	
system. It is using pinger-prints markines and	
location tracers to catch the culprets through	
AI based algorithms. Somilarly bermany and	
Netherland also dilize AT - surveillance	
system to combol cybercrème en order to provede	
protection to their citizens. It means, Al has	
powerful ability to control cyber-attacks and	
give maximum protection against privacy. Therefore,	
Live maxemom protection	
AI és en expertise tool for prévacy protectéon.	
scinctarly, self-driving cars have	
tendency to protect and control road accidents.	
As per, the report of WHO, 1-19M accidents occur year	my
due to human error. It means, AT bised	
dréverless rehécles are the best atternative	

<b>13</b>	,
	1_1-

the state of designation	to control road accidents. The demand of
•	self driving cars have augmented. Developed
Control of the Contro	as well as developing countries like us, uk,
-	Sweden, UAE, and Saudi Avab are beneficiang
, 1	sweeth, one para squared road accidents
	from self-driving cars to control road accidents
	and air pollution. As per the report of Fortune
	Business (FB) insights, he global autonomous
,	vehicle market size was \$1921-18 in 2023,
. ——	and it is projected to reach \$13632.48 by
	2030. Hence, extrancing use and demand prove
,	that AI has created technology for protection
,	against road accidents.
	Lastly, AI has broked the chains
	of language barriers through its unprecedented
	developments. AT has controduced certain voice
	assistants and translators like Siri Alex, and
-	google translators to understand, interpret,
	and communicate with humans easily these
<b>,</b>	assistants receive commonas and communicate
٠	after understanding them. Interestingly, Hela MI
	has buit a midle! named no language left
	behind (NLLB-200) for the translation of
	200 languages. It is working very 1952-

	·
to enhance number of Languages: NLLB-200	
has tendency to translate English, Chinese, Spans	sh,
French, Arabic, was et languages. Similarly,	
India has taken substanted benefits from AI	
based algoréthms to translate and communicate	
on Tamel, Hende, Tegu, and Malayalam to	
provède easy platform for farmers and élliterale	
people. Thus, AI has negated the concerns related	L
to language barréers.	
To conclude, AI és a game changer	
for the world. It has enhanced its domains and	
covered the destinations pastly. At his made various	
developments in the fields of communication, inform	raita
technology, agriculture space, education, and health	
which show that the private of AI would be private	Tel.
Howevey, some researchers are of the read that	
el- és a pandara box par terrépains puture becar	)86
many hardronces are present for AI like	
prévocy concerns, unemployment concerns, and	
Language barrolers that linetize and but a	
death blow to its exhibitionent. Neverthless,	-
the amount of successes of AI are more than	
that of its failures. Achievements like	
U U	

	$\smile$ .
	/
	creation of 974 jobs, self-driving cars, and
	NLLB-200 Language translations are proved
_	that AI is going to bring a new eva of
1 *1-	prosperity in the world, which will provide
_	countless apportunities to the world to bake
