

TECHNOLOGY A NEW ECONOMY:

Outline

1) Introduction

1.1) Hook

1.2) How technology is leading us towards a new economy?

1.3) Thesis Statement: The 21st century is all about technology, the new mantra of becoming a side power in this world for a country is to advance their technology in every sector.

Good formation of thesis statement

2) Technology in different sectors shaping a new economy:

2.1) Role of freelancing boosting an economy

2.2) Trading becomes easy (350.158 million FY24)

Economic Survey 2023-24

2.2) Trading becomes easy through e-commerce platforms:

(Alibaba, Amazon, Dorez)

2.3) Role of Internet in Industries:

(5G technology)

2.4) Financial dynamics are changing into

Cryptocurrency:

(Trading in Bitcoin)

2.5) The Role of Robots in Healthcare and manufacturing

(Image-guided Surgery, IGS, SCARA)

2.6) Payments can be done through digital platforms

Digital banking

(easypaisa)

2.7) Renewable energy technology shaping the country towards the less use of non-renewable sources.

(Solar panels, Electric vehicles)

2.8) The sector of education is transitioning into digital education.

(Udemy)

2.9) Biotechnology role in agriculture production.

2.10) Role of technology in defense system.

2.11) Digitization in corporate sector.

3) Benefits of technology in remodeling an economy.

3.1) Technology help the economy in global connectivity.

3.2) Technology leading towards sustainable benefits.

3.3) Transformation of Financial Inclusion.

3.4) Renovate paper work system into digitization.

3.5) Interference of technology result in productivity and efficiency.

Well organised and Relevant

4) Conclusion:

History Reveals

Essay:

If we look back into the history, the country with more non-renewable resource knows to be have a stable economy. The means of trading are these resources like: oil, natural gas, minerals. But we currently, we are seeing the world order is reshaping whether it comes in unipolar to multipolarity, depending on renewable resources technology rather than the non-renewable. In result,

~~we can say that~~ Do not write in First I my me we our us

the technology playing its real role. Let's have a look on our neighboring countries China and India. China came into independence after Pakistan but due to their advance technology they are known as the second largest economy.

Command over basic language is fine

currently. In all over the world, the Chinese technology has been using in one way or another. San got for the India, In recent past years India changed themselves as in the top five largest economy due to their technology as

India is known to be a technology hub. But how non-developing countries can boost their economy. The answer is through technology, somehow we can say that there is a direct relation of technology with the economy in current era. The more digitization in work, the more it lead towards the productivity. The use of Artificial Intelligence in big means can help the country to resolve their some of the issues like, traffic system, surveillance system ~~to~~ ^{Can be} ~~the~~ ^{resolved} ~~the~~ ^{waiting in} ~~long~~ ^{lines} ~~can be~~ ^{resolved} ~~through~~ ^{technology} by expanding lines or digital appointments. Whether it's macro or micro level the use of technology can help to boost the economy. The 21st century is all about industry bridge into technology. The new motto of becoming a sole power in this world for a country is to advance their technology in every sector.
