

Mock Test 1

Climate Change Causes and Consequence

Brainstorming

Causes

- Deforestation
- Industrial waste
- Green house gases

Consequences

- Pollution
- Health Issues
- Depletion of ozone

U r capable to diversify ur ideas

"Climate Change is no longer some far-off problem. It is happening here it is happening now"

The main cause of Climate Change is Deforestation, Green house gases, Industrial waste unfortunately all countries in the world including

Faces challenges posed by

~~Pakistan faces climate change~~

Outline

Causes:

1. Deforestation

- Impact carbon cycle
- Climate Instability
- Loss of biodiversity
- Loss of Species
- Agricultural expansion/Infra-structure development

2)

Over Population Industrial Waste

- Global warming
- Glaciers Melting
- Polluted water
- Radio active waste
- Lower the vegetation Quality

Green house Gases

- Atmospheric Contraction
- Decay of organic waste
- Temperature Change
- Change in earth's structure
- Emission of Radio active waves

Generating Powers

- Burning of fossil fuels
- ~~to~~ Coal energy
- Manufacturing of chemicals
- Transportation
- Globally Residential building
consume electricity

Consequence

Pollution

- Ice age storms
- Rising of oceans
- Increase drought

- Destruction of Sand

Health Threats

- Respiratory and heart disease
- Water and food related illness
- Pest related diseases
- Cause of breast cancer
- Infectious diseases / Allergents

~~Depletion of ozone~~

- Slow recovery of ozone layer
- Emission of CFCs
- Hole in ozone layer

Introduction

~~But~~ Climate Change is not the problem of one country. ~~It is international issue.~~ It has become an international issue. The main cause of climate change is the Deforestation, Agricultural

expansion. Infrastructure development
involves population, urbanization
cutting of trees is illegal
but the people cut it
it for their own use

another cause of climate
change is industrial waste
the emission of chemicals
and waste product from

Write short sentences plz

the ~~main~~ pipeline of the
industry cause severe pollution
and these water pollution

cause adverse effect on
human health as well as
marine animals. Green house
gases such as chlorofluro

- Carbon extant CO_2 and
other dangerous gases which
is become the result of
ozone hole and ultraviolet
rays directly enters into
the earth

In the response of all these activities Melting of glaciers, Rising of oceans, Increase drought, Destruction of sand, Respiratory disorders, Water born diseases, breast cancer, ~~immunosuppression~~ will ~~happened~~.

Plz try to have better command over language
