

Climate Change: Causes & Consequences.

Brain Storming:-

Outline

Introduction:

Hook

General Statement

Thesis Statement:

There are several
ills causing dangers to the
natural setup all excessive
usage of ~~non-ener~~ non-renew-
able energy resources, usage of
coal & in railway engines &
bricks formation, usage of
fuel in automobiles, cutting
of trees, no practical policy
for preservation of forest
and less usage of advance
technologies to filter poisonous
gases & liquid ~~sp~~ spiltages
into water. These all
result in excessive floods, heat
waves, ozone layer depletion,
abrupt & undefined changes
in weather, strong winds,
tornadoes & cyclones.

B: Causes of Climate Change.

B.1: Excessive usage of Non-Renewable energy resources in industries.

B.1.1. Usage of coal

B.1.2. Usage of Natural Gas

B.1.3. Usage of Oil

B.1.4. Usage of Nuclear Energy

B.2: Usage of fuel transportation.

B.2.1. Fuel in automobiles

B.2.2. Coal in engines of trains

B.2.3. Usage of fuel in aeroplanes and cargo ships.

B.3. Less use of advance technology to filter poisonous wastes in the form of gasses & liquids

B.3.1: Advance filtration technology at chemical spillages in industries.

B.3.2: Advance technology for filtration at chimneys of industries and bricks formation.

B.4. Cutting of trees at excessive rate.

B.4.1: No practical policy to preserve forests.

B.4.2: Decrease in Forests.

B.4.3: No or less new plantation schemes.

C: Consequences of Climate Change:

C1: Excessive floods

C2: Ozone layer depletion

C3: Heat Waves, cyclones, tornadoes

C4: Abrupt & Undefined weather changes

C4.1: Wild fire.

D. Conclusion.

- Restate the Thesis Statement
- Summary of ideas
- Concluding Essay.

The Essay:

While lying down^{in a meadow} in Kaghan Valley, looking at the beautiful blue sky; half covered with white fluffy clouds. I was enjoying the cool breeze of the near by river, listening to the only sound of birds chirping. It was the day in mid of May. Lost in the peace I suddenly received a call from a relative, who was living in Karachi. I was shocked to hear when he told me about the death of 15 people in just four days due to heat-wave. He further told me about the death of birds & animals. I started to think that if May is so hot

Then how hot will be June & July? The question forced me to think about the reasons for why this is happening. After each & every seconds points were coming to my mind. That this happened because of climate change. My mind told me several ills that were causing damage to natural setup are; excessive usage of non-renewable energy resources, usage of fuel in transportation, no or less usage of advanced technology at emitting points of poisonous liquid & gases, and no policies in practical for preserving forests. These result in floods, heat waves, ozone layer depletion, abrupt changes in weather, abrupt tornadoes & cyclones, strong winds,
