The Essay

According to Paul Polman, "Climate change is sometimes misunderstood as being about changes in the weather. In reality it is about changes in our very way of life". Climate change is not just about Carbon dioxide. It is about our public health and protecting our Earth for future generations.

As regard of Pakistan There are several causes of climate change including environmental & natural causes, human activities, lack of personal & political will, mismanagement of water resources along with financial problems. The immediate consequences are extreme weather events, effects on economy, widening the ever existing gender gap and refugee problem. Unless these cause & consequences are not addressed properly Pakistan can neither become prosperous nor respectable.
