

Brainstorming
Climate changes in Pakistan Causes
and Consequences

Outline

1. Introduction

- 1.1. Attention grabber
- 1.2. Overview / Background
- 1.3. Thesis statement

2 Main Body

A) CAUSES OF CLIMATE CHANGE

2.1 Global factors

- 2.1.1 Greenhouse gas emission from industrialized countries
- 2.1.2 Global warming and rising temperature

2.2 Local contributors

- 2.2.1 Deforestation
- 2.2.2 Rapid Urbanization
- 2.2.3 Lack of environmental regulations

B) CONSEQUENCES OF CLIMATE CHANGE

2.1 Environmental factors

- 2.1.1 Changes in rainfall pattern and drought
- 2.1.2 Rising temperature and heat waves

2.2 Economic factors

- 2.2.1 Threat to agriculture and food security

2.2.2. Damage to infrastructure from floods and extreme weather

2.3 Social and Health effects

2.3.1 Displacement and climate-induced migration

2.3.2 Public health crises

2.3.3. Impact on vulnerable populations.

3 Conclusion

3.1 Thesis restated, Summary of the idea presented

3.2 Concluding thoughts

Maldives, may become the world's first ~~country~~ country to vanish underwater not because of ^{change} was but because of climate. Scientifically and historically of climate changes with time but modern climate change occurred mainly after industrial revolution. but with passing time this issue is becoming worse. The World's Meteorological Organization (WMO) reported that the last year (2024) was the hottest year till date. Now question arise, what will be the future of the world in this circumstances. Because with each passing day we are coming closer to global climate crises.

The emissions that can cause climate change mainly come from six countries namely (China, USA, India, EU and Brazil) together these countries emit more than 50% of global greenhouse gas emission. Pakistan is responsible for less than 1% of global greenhouse gas emissions, ranks among the top countries most

1 vulnerable to climate-related disasters.
The causes of climate change in Pakistan include global factors and local factors but climate change results many consequences such as Environment factors, Economic factors, social and health effects.
