

Climate change: Causes and consequences

Brainstorm

Climate change

Causes

- Forest loss
- Industrial Emissions
- Land changes
- Greenhouse gases
- Farming Practices

Consequences

- Rising Temperature
- Melting Ice
- Extreme weather
- Biodiversity loss
- Agricultural Impact

Outlines

1. Introduction:

1.1 Attention Grabber

1.2 Background Information

1.3 Thesis Statement: Of climate change such as
There are several causes related to Forest loss, industrial emissions, land changes and farming practices. While consequences are rising temperature, melting ice, extreme weather and bio-diversity loss.

2. Main body:

(A) Causes of climate change

2.1 Forest loss

2.1.1 Deforestation effects

2.1.2 Reduced Absorption

2.2 Industrial Emissions

2.2.1 Factory Pollution

2.2.2 Energy use

2.3 Land changes

2.3.1 Urban Growth

2.3.2 Tree loss

Don't you think it is linked with 1st point..

2.4 Farming Practices

2.4.1 Livestock methane

2.4.2 Fertilizer use

(B) Consequences of climate change

2.1 Rising Temperature

2.1.1 Heatwaves

2.1.2 Global warming

2.2 Melting ice

2.2.1 Glacier loss

2.2.2 Sea-level rise

2.3 Extreme weather

2.3.1 Droughts

2.3.2 Floods

2.4 Biodiversity loss

2.4.1 Species extinction

2.4.2 Ecosystem damage

3. Conclusion:

The Essay

"People can live without love but not without water." Climate change refers to long-term changes in weather temperature, and other environmental conditions on earth. It is mainly caused by human activities like burning fossil fuels, cutting down forests, and industrial pollution. These activities release harmful gases such as carbon dioxide and methane into the air, trapping heat and causing the planet to warm up. This warming leads to many problems. For example, glaciers and ice sheets are melting, which causes sea levels to rise and threatens coastal cities. Extreme weather ^{events} like floods, droughts and heatwaves are becoming more common. Additionally, wildlife and plants are struggling to adapt, leading to a loss of biodiversity. The effects

Day: _____

Date: _____

of climate change are already being felt around the world, and if we don't act quickly, things will only get worse. However, there is still hope. By reducing emissions, protecting forests, and using cleaner energy, we can slow down climate change and build a safer future for ourselves and the generations to come.

General suggestions

Try to transform your points into argumentative way.
