

Topic:

"Climate Change In
Pakistan: Causes And
Consequences."

Outline:

1 Introduction

1.1) Barack Obama said,
"We are the first
generation to feel the
climate change and the
last generation who can
do something about it."

1.2) The main causes of
climate change in Pakistan
are similar to those
globally: increased
green house gases
emissions from burning
fossil fuels, agriculture
practices, and land
use changes.

1.3) Tremendous social,
environmental and econo

mic impacts

1.4) Thesis statement

2 What are the causes of Climate Change in Pakistan?

2.1) Increased Green House Gas emissions:

2.1.1) From fossil

fuels combustion

you are writing the same phrases plz diversify your expression

e.g. burning coal

oil and gas.

2.1.2) From agricultural activities particularly live stock farming and rice cultivation.

2.1.3) Through land use changes:

deforestation and urbanization etc.

2.1.4) Environmental degradation reduces the environment's ability to absorb carbon dioxide

2.1.5) Pakistan ranks 31st in this year's Climate

DATE: 1/1

plz drag these to left

Change Performance Index (CPI)

2.2) Geographical Location of Pakistan.

2.2.1) Pakistan's location
made it susceptible
to extreme weather
events.

2.2.2) Rise in flooding.

2.2.3) Intensification
of droughts.

2.2.4) Extreme heat
events.

2.2.5) Dean Emeritus
at the Boston University
Pardee School of
Global Studies Professor
Adil Najam said, "For
2022, Pakistan was
number one most
affected country
because of super
floods."

2.3) Dependence on
monsoon rainfall.

2.3.1) Changes in
rainfall patterns

2.3.2) The World Bank's 2025 report:

climate change will significantly impact monsoon rainfall patterns, leading to both increased rainfall and more frequent extreme events.

2.4) Melting Glaciers and Rise in Sea-level:

2.4.1) Melting of glaciers in Himalayas, which are the source of many of Pakistan's rivers.

2.4.2) The World Water Development Report 2025, released by UNESCO says:

Hindu Kush, Himalaya could lose 50 pc of glaciers by 2100.

2.5) Socio-economic factors leading to:

climate change.

2.5.1) Social Causes:

2.5.1.1) Rapid population

Growth strain

natural resources,

increasing pressure on

water, land and energy.

2.5.1.2) Poverty & inequality

2.5.1.3) Lack of resources

and infrastructure in

poorly developed area

further reduces adaptive

capacity to climate change.

2.5.1.4) Lack of awareness

and prioritization.

2.5.2) Economic Causes:

2.5.2.1) Rapid industrialization

is the major factor

towards climate change.

2.5.2.2) Generating power

and need for new

power plants lead

to further exacerbating

the problem.

2.5.2.3) Financial Instability

in the country

2.5.2.4) Budget Deficit

to reduce the

risk of Climate Change.

DATE - / /

2.5.3) In 2025, United Nations reports highlight that Pakistan faces a heightened climate crisis, despite contributing less than 1% to global emissions.

2.6) Weak Governance and institutional capacity.

2.6.1) Ineffective climate change policies.

2.6.2) Corruption and lack of coordination between different government agencies.

2.6.3) In the coming year, Pakistan's climate change policies face challenges and need improvement, according to its 2025 UN report.

3 Consequences of climate

change in Pakistan: It is
too lengthy

3.1) Extreme Weather Events

3.1.1) Increased frequency and intensity of tidal waves, destructive cyclones, droughts and floods.

3.1.2) The last decade.

2011-2020 is the warmest on record.

3.1.3) Wildfires start more easily when conditions are hotter.

3.1.4) Climate Risk Index
CRI 2025 truly ranks Pakistan 1st among top ten countries most effected by extreme weather events in 2022.

3.2) Water Scarcity:

3.2.1) Changes in rainfall patterns and glacier melting can lead to water scarcity, impacting agriculture, industry and human populations.

According to a 2018 report by IMF
3.2.2) Pakistan ranks third in the world among countries.

Facing acute water shortages
Reports by (UNDP) United Nations

Development Programme and
Pakistan Council of Research
in Water Resources (PCRWR)
also warn the authorities that
the South Asian country
will reach absolute
water scarcity by 2025.

3.3) Food Insecurity

- 3.3.1) Negatively impacting agricultural productivity, leading to food shortages and price increases.
- 3.3.2) Deserts are expanding, reducing land for growing food.

3.4) Public health deterioration

- 3.4.1) Disease outbreaks and changes in disease vectors

3.4.2) Extreme weather events increase deaths and make it difficult for Health Care Systems to keep up.

3.4.2) According to WHO's report in Pakistan the average

temperatures are expected to rise to 6.1 °Celsius until 2100. This could lead to health-related deaths to rise, about 63 deaths per 100,000 until the year 2080, which were recorded as 10 per 100,000 until 1990.

3.5) Economic Impacts

3.5.1) Significant economic losses due to damage to infrastructure, agriculture and other sectors.

3.5.2) Climate change increases the factors that put and keep people in poverty.

3.5.3) Heat can make it difficult to work in outdoor jobs.

3.5.4) One of the major hindrances in development of Pakistan.

3.5.5) According to the World Bank Group's Country Climate and Development Report (CCDR) 2020, the combined risks of extreme climate-related events, environmental degradation,

and air pollution are projected to reduce Pakistan's GDP by at least 18-20% by 20250.

4 Conclusion:

4.1) Plan a fossil fuels phase out.

4.2) Implement more renewable energy projects.

4.3) Improve monitoring and enforcement mechanism for national climate policies.

THE ESSAY

try to write more formal please

According to former US president Barack Obama, "we are the first generation to feel the climate change and the last generation who can do something about it."

So Climate change is the defining issue of our time and we are at the defining moment. It is a wreaking havoc ~~for~~ ^{on} global community ~~is~~ ^{is} ~~not~~ impacting Pakistan more significantly. In Pakistan there are so many natural and artificial factors like rising temperatures, increased green house gas emissions, geographical location, dependence on monsoon rainfall, melting of glaciers and rise in sea level, weak governance and institutions, capacity and most importantly the socio economic factors are exacerbating the climate change. And all these ~~will~~ ^{will} have drastic consequences; extreme weather events, water scarcity, food insecurity, public health deterioration and weak economy. Hence, there is a dire need to effectively address the issue of climate change immediately.
