

Make a comprehensive outline.. it's too generalized  
Follow proper pattern of outline  
Introduction : follow structure must be the summary of your essay  
Give proper argumentation  
Too generalized  
Properly study the topic don't give points in the air must have references to support your argument  
This is a competitive exam essay take it as a serious

# Climate Change in Pakistan : causes and challenges

## Introduction:

As Greta Thunberg powerfully stated, "I want you to act as if the house is on fire, because it is." Climate change is not just an environmental issue. It is a call to action for humanity. ~~This~~ This powerful reminder underscores the urgent need to tackle the climate challenge that afflict societies globally. Climate change issue not only stems from deep rooted systemic problems but also leads to significant adverse effects on individual and communities. While some countries have made significant advancements in addressing the challenges, others, including Pakistan, continue to struggle. The main causes of ~~climate change~~ <sup>unsustainable</sup> are socio-economic evils: deforestation, agri-practices, greenhouse gas emissions and fossil fuel dependency, leading to severe consequences such as extreme

weather events, water scarcity,  
agriculture decline and heightened  
public health issues

## 2. Causes of Climate Change

a- Green house gas emissions

Sources : industries and transportation
