BrainstormCauses and consequences of climate changeOutline1. Introduction

The 2022 floods in Pakistan, which displaced millions and caused billions of dollars in damage, serve as a stark reminder of the escalating threat of climate change and its devastating impact on the country. The whole world is facing the climate change issues and disasters,

the Paris agreement is the best example of climate change concerns that was signed in 2016. The whole world is concerned about climate changes and its impacts but the developing countries are most affected and unfortunately Pakistan is also one of them.

Pakistan is highly vulnerable to climate change impacts, experiencing rising temperatures, erratic weather patterns, and increased frequency of extreme events like floods and droughts, which threaten water scarcity, food security, economy.

2. Mainbody

Causes and Consequences

(A) Causes

2.1 Green house gases

2.1.1 Industrial Process:

2.1.2 Transportation:

2.1.3 Power building:

2.2 Deforestation

2.2.1 Specific Crops :

2.2.2 Infrastructure development :

2.2.3 Urbanization :

2.3 Agriculture

2.3.1 Methane emission :

2.3.2 Nitrous oxide emission :

2.3.3 Fertilizers :

2.4 Dependence on fossil fuels

2.4.1 Transportation :

2.4.2 Production :

2.4.3 Building Powers :

(B) Consequences

2.1 Human health :

2.1.1 Vector-borne diseases :

2.1.2 Anxiety and stress :

2.1.3 Air pollution :

2.1.4 Food borne and water borne diseases :

2.2 Extreme weather events

2.2.1 Heatwaves :

2.2.2 Flooding and storms :

2.2.3 Droughts :

Day: _____

Date: _____

2.3 Economic impacts

- 2.3.1 Increased Poverty:
- 2.3.2 Disrupted Supply chains:
- 2.3.3 Crop failure:
- 2.3.4 Healthcare costs:
- 2.3.5 Damage to infrastructure:

2.4 Impact on Agriculture

- 2.4.1 Soil degradation:
- 2.4.2 Water quality:
- 2.4.3 Wheat and Rice:
- 2.4.4 Increased vulnerability to diseases:
