

Date: Reforestation is the (Global) Urgency.

## Outline:

### Introduction:

### Thesis statement:

Climate Change remains a looming and emerging threat for earth's sustainability; its far-reaching implications can be manifested in various forms; heat spills, floods, and droughts; therefore, reforestation remains an influential figure in order to counter the plight of Climate Change.

2- Reforestation plays a pivotal role in order to grapple with the persistent challenge of Climate Change.

3- Why reforestation is the global urgency:

(3.1) To counter the plight of heat spills;

Date: \_\_\_\_\_

## Case study!

In Saudi Arabia, 1300

pilgrims succumbed to

soaring temperature (51.8°C)

**(3-2)** To safeguard the backsliding of  
democracy;

## Case study:

In Maldives, the

public are protesting

against the ruler's

policies regarding

Climate Change.

**(3-3)** To minimize the economic losses  
across national and international markets;

## World Bank Report:

In 2022 flood, Pakistan

lost \$32 billion and

33 million people

were displaced.

Date: \_\_\_\_\_

(3.4) To maintain the balance of  
sea level;

United Nation (UN)  
declared 2025  
as international  
year of glaciers  
preservation.

(3.5) To minimize the risk of meteorological  
droughts;

### Case study:

Namibian government  
ordered to kill  
100 elephants in  
order to fulfill  
the demands of  
the food.

(3.6) To safeguard the already threatened  
biodiversity;

### Case study 2

Date: \_\_\_\_\_

In India, the wolves  
are coming out from  
the forests and  
attacking the common  
public.

(3-7) To protect the rights of marginalized  
groups;

### World Bank Report: 2022

Since 2022,  
an increase in  
child marriages  
has manifested  
across the different  
regions of Pakistan.

(3-8) To counter the looming threats,  
related to health care issues;

### Case study:

In Lahore, Particulate  
matter PM 2.5 is  
recorded, which cause  
asthma problems.

Date: \_\_\_\_\_

(3.9) To maintain the flow of educational system;

### Case study:

Due to fog, schools in Delhi and Lahore have been closed a number of times.

(3.10) To protect the planet from wild fire challenges;

### Case study:

In 2024, the US faced the massive challenge of wild fire, resulting in both social and economical losses.

## 4- Conclusion:

\* Climate change is not the problem of future; however, the problems of present. Therefore, a robust and proactive mechanism is required to implement the idea of reforestation.

as a first priority.

It is not a concept

Date: \_\_\_\_\_

In the contemporary era, the concept of reforestation becomes pivotal because the world is facing the looming threats of climate change across the different sections of the planet. Today, mass-level deforestation has caused numerous challenges for the world including rise in sea levels, increase in heat spills and increase in meteorological droughts. Consequently, leading to various challenges: floods.

Killing of people and food insecurities.

Moreover, these persistent challenges are

not only limited to these areas, but also

impacted the <sup>other</sup> various sections of life. Therefore,

it is high time for the world to introduce

a robust and a proactive mechanism

in order to implement the concept of

reforestation in true spirit and letter.

Because the ticking bomb of disasters

is almost there. Hence, it is high time

to show seriousness regarding the

looming threat of climate change.

Today, the concept of reforestation

becomes pivotal in order to grapple with

Date: -

the persistent challenge of climate change:

In modern world, the cycle of disasters are hanging over the world like a damocles sword. In these disasters, food insecurities, backsliding of democracy and impact on marginalized groups can be recorded.

For instance, to shade a light on the backsliding of democracy, recently in India, the government noticed that those areas where the temperature was on its peak mainly result in low-voter turnout, in 2024 elections.

Ultimately, this finding underscores that climate change is not only impacting the environment but also challenging the pillars of democracy to prevail in true spirit and letter. Thus, in order to shift towards a sustainable future where everything goes smoothly with <sup>the</sup> nature, where the upcoming generations enjoys their lives without any Afghan stable, the world nations effectively need to introduce and declare the concept of reforestation as a global urgency.

Firstly, reforestation is a global

Date: \_\_\_\_\_

urgency in order to counter the plight of heat spills across the different regions of the world. Recently, different parts of planet recorded an unsustainable increase in heat spills due to an increase in overall temperature of earth. Ultimately, an unsustainable increase in heat spills killed 1300 pilgrims in Saudi Arabia due to soaring temperature (59-8°). Similarly, due to heat spills, 427 bodies recovered by Ehsaas center in 2024 across the different regions of Pakistan.

Hence, the above data underscores that climate change is just not related to environment. However, its deteriorating impacts likely result in the killing of thousands of people. In order to grapple with this challenge, reforestation is the ultimate way. As the reforestation has the ability to maintain the earth's temperature.

Moreover, the prospects of reforestation is just not limited to heat spills, but it has the potential to safeguard the backsliding

Date: \_\_\_\_\_

of democracy. Currently, rise in protests has manifested across the different sections of the planet against democratic governments for not taking prudent action against the climate change policies.

For instance, in 2018, a large-scale protest was recorded in Maldives against the government for not taking the threats of climate change seriously.

The length of paragraphs is fine  
Evaluating and analyzing the condition of Maldives, the experts have voiced concerns that such protests have the potential to exacerbate the country's

order, providing a loop for authoritarian like minded leaders. The best example

can be seen in the form of Hitler who

took the advantage of situation and

later ruled as a dictator. However, to counter the threats of another Hitler for

the world in future, the world nations

vibrantly and dynamically needs a concerted

and a proactive mechanism for the implementation of reforestation plan; and bearing in mind

that time and tide wait for none.

Date: \_\_\_\_\_

Furthermore, reforestation plays an indispensable role in minimizing the risk associated with economy. Surprisingly, in fast-moving world, impacts of climate change exceed from the domain of environment. Currently, it equally and effectively leaves a far-reaching implication when it comes to economic growth. Recently, it can be seen via analyzing and evaluating the destructions made by devastating floods in Pakistan. In 2022, Pakistan manifested the deteriorating impacts of flood in the form of economic losses; ultimately, pulled the country in the perpetual cycle of challenges. To evaluate these economic losses, the **World Bank (WB)** gave a report: Pakistan lost **132 billion including 33 million people displacement in 2022**. Hence, this report underscores that reforestation remains a necessary crossing of the Rubicon in the fight against climate change in order to avoid its doldrums both environmentally and economically.

Date: \_\_\_\_\_

Similarly, the needs of reforestation remain a global urgency because rise in sea level has manifested. Initially, when the environment used to sustainable, a natural flow and maintenance in sea level has observed, however, due to rapid increase in global temperature, an increase in sea level has occurred.

Ultimately, rise in sea level happens due to melting of glaciers. Consequently, it does not only alarmed the world but also increased water in rivers, impacting

various spheres of life: political, social and economical. Seeing an increase in the disasters, the United Nation (UN)

made a historic choice: to introduce

prudent and planned mechanism in

order to counter the plight of sea level

increase. Therefore, UN declared 2025

as international year of glaciers preservation.

To sum up, by analyzing above concern,

it can be appropriate to say that

reforestation is the ultimate way that

can restore the old status of environment

and could help to maintain the sea level.

Date:

Importantly, due to rise in overall earth's temperature, the world has been manifesting the likes of meteorological droughts. Currently, several countries are facing the looming threats of meteorological droughts including South African and South Asian regions.

A case in point is Namibia's government

record where the government

ordered to kill 100 elephants in

order to fulfill the demands of the food.

This scarcity happened due to lack

of water. As the country faced

shortage of rain due to increase in

heat. Consequently, it resulted in

low water for agriculture lands; ultimately,

disturbed the food demand and supply

chain. This example demonstrates that

rise in temperature proportionally

impacts food cycle, beggars description, further

pushing the country towards marginalization.

Hence, it becomes equally important for

the state and stakeholders to introduce

flexible and adaptable mechanism for  
reforestation in order to counter the demand of

meteological droughts.

Additionally, the mechanisms of reforestation becomes imperative, in order to protect the already threatened biodiversity across the world. Today, anthropogenic activities significantly disturb the living mechanisms of biodiversity; ultimately, this disturbance resulted in the extinction of many biodiversity. For instance, **Bramble Cay Melomys**. The extinction of Bramble Cay melomys reported by International Union for Conservation of Nature (IUCN).

As per the analysis of IUCN that due to rise in sea levels, Bramble cay melomys faced extinction. Similarly, In India, due to deforestation cases in Uttar Pradesh the wolves and other animals are coming out from the forest; consequently, opening a way between animals and humans for the seek of survival. Thus, the above case studies show that the ultimate need of reforestation is just not limited to environment, but its needs become proportionally important in order to safeguard the home of biodiversity.

Moreover, the urgency of reforestation becomes important to safeguard the rights of marginalized and oppressed groups. This might be surprising that how climate Plz avoid such meaningless phrases violates the basic and fundamental rights of the marginalized groups. As ill luck would have it, it is not a surprise; however, a reality that climate impacts severely and significantly violates the rights of oppressed communities. To understand this argument the report published by World Bank (WB) become equally important.

**Due to 2022 flood in Pakistan, girl**  
rise in child marriage has manifested. The question arises why: a rise in female marriages has observed. Because in already poverty-stricken areas people become compelled to marry their daughters in order to get some food for the rest of family members. Apart from marriages, female forced rape cases due displacement. Recently, The Guardian covered news that due to floods in Congo, a number of females has

It is quite irrelevant

→ ~~faced sexual harassment during the time of evacuation. Thus, the above studies suggest that climate change disproportionately violates the rights of marginalized groups.~~

Date: \_\_\_\_\_

Over and above, reforestation becomes a global emergency in order to counter the plight of climate change related to health issues. In current dynamics, the determinantal impacts of climate change have proportionally impacted the health of humans in numerous ways: respiratory problems, heart problems, and lungs cancer. Ultimately, due to these diseases the large portion of society faces a significant challenges related to health. To understand the impacts of climate change on health; recently, the government of Punjab notices a Particulate material 'PM2.5' in Lahore's atmosphere. Amazingly, PM2.5 - a mote - has severely cause asthma problems. Similar report was published by World Health Organization (WHO) in 2013 which highlights that around 1.7 million people dies annually due to bad air quality. Hence, the above both studies suggest that world is left with a Hobson's choice:

Date: \_\_\_\_\_

to introduce flexible and adaptable mechanism for the idea of reforestation.

Besides this, the impacts of climate change have risked the education of children. As it discussed

~~earlier that climate change has changed its domain from environment to other parts of life. Recently, due to heavy fog, Indian government closed its educational institutions due to fear of negative impacts on psychological and emotional order of its children.~~

Similar case was observed in Pakistan where schools in Lahore were remained close due to heavy smog ~~across~~ the different regions of Lahore. The both cases underscore that due to heavy fog and smog both countries faced the shutdown of schools.

Surprisingly both countries are already between Scylla and Charybdis:

low literacy rate and high dropout ratio.

Therefore, it is high time for the world to accept that climate change is a transnational challenge, which needs

Date: \_\_\_\_\_

collective efforts - reforestation.

Furthermore, the mechanism of reforestation becomes important in order to protect the planet from wild fire challenges. Currently, a major shift in wild fire cases has manifested across the world; owing to, further deteriorating impacts on climate and further pushing the world in marginalization. For instance, in the United States (US) - California City - a massive wildfire had seen, which resulted in the **burning** of animals and

the displacement of large population.

Similar case happened in Australia

where thousands of animal burned

due to ~~destructive~~ wildfire, in 2020.

Thus, the above studies reflect that

the mechanism of reforestation remains

prudent in order to bring the world

back to sustainability. Here the

words of **Lady Bird** affirm perfectly,

**"The environment is where we all meet,**

**and where we all have a mutual**

Date:

interest, it is the onething all of us shall".

How reforestation as a global challenge

To recapitulate, the idea of reforestation remains important and relevant for the world and multi-stakeholders to re-consider their commitments and accords, which they have signed in different protocols.

They have to reassess their pledges and engagements! They have to understand that due to their bad choices the Damocles' sword of disasters are hanging over world in the form of wild fires, loss in biodiversity and negative impacts on human's health.

Now they shall understand that the mechanism of reforestation is a global emergency. Ultimately, if the world major powers accept that the planet is trembling under a cloud of disasters than there is a utmost chances that planet could survive in coming times. Therefore, it becomes the duty of the world to take a

Date: \_\_\_\_\_

~~President and a proactive mechanism  
in order to bring the idea of reforestation  
in a reality, and keeping in mind that  
after all **Rome** wasn't built in a day!~~

In the end, the words of **David Attenborough**  
resonate perfectly,

**"The world cannot afford  
to wait any longer to  
address the threats of  
climate change. It is a  
global emergency; it  
requires urgent action."**
