Environmental Terrorism

There is no denying the fact that the world is observing climate change. Water scarcity, food insecurity and rise in temperature have ^{threatened} the human life drastically. In Pakistan, **2022** flood has proven the severe impact of climate change that hit the country socially and economically i.e. **46 bn USD** and **1739** people lost their lives. Besides, the Hindu Kush Himalaya mountain ^{range} that is considered the Asia's water tower, Pakistan's only reliable source of water, is now in trouble. According to the ^C International center of integrated mountain development, snowmelt contributes nearly **25 pc** of the annual water flow to **12** major river ^{basins} ^{been} basin. However, the flow has been affected due to the climate change and flow has seen below the ^{Meteorological} expected data. Moreover, the Meteorological department of Pakistan officially issue a draught

alert for Sindh, Punjab and Balochistan. The department has also sent a letter to the provinces about the ~~shortage of water in~~ Tarbela and Mangla dam ~~shortage of water~~. These alarming issues are fueled by number of factors.

"Environmental Terrorism"

Environmental terrorism is the main cause of climate change and the only factor that seems to be proven a murderer of the nature and human life. The phenomena includes deforestation, use of outdated agricultural techniques, excessive use of urea, population and urbanization.

Cutting living creature is crime, the perpetrator must be held into the custody. Deforestation is crime, it is an act that always ignored the love for humanity. Many communities indulge in the process, in order to make money for their survival. They are using woods for furniture and decorative purpose that comes in the category of Environmental terrorism. The authority must

must implement strict laws and impose high fines to avoid this heinous act that effect people's livelihood. Secondly, the world is moving towards technologies whilst Pakistan still using the outdated techniques for agricultural purpose. These techniques harm the longevity of the soil and incline them towards impaired soil. Resultantly, poor agricultural leads to poor growth of greenry that of course, affects the climate pattern.

Therefore, the policymaker should ensure technological equipments for the agriculture in order to avoid environmental terrorism.

Thirdly, Urea is considered ~~a~~ the most important catalyst for growth of agriculture, but it is well defined fact that ~~anything~~ ^{destroys} that exceeds limit destroy its credibility. Therefore, using excessive ~~of~~ urea is another form of environmental terrorism.

Many people use urea to growth more and earn more. Hence, they use urea excessively that ultimately

causes soil erosion and leads to impaired soil. Lastly, the foremost and most neglectable environmental terrorism is over-population and urbanization. These two factors have damaged the environment drastically. There are no two options, that over population is an act of destruction.

Family planning must be ensure in the communities in order to avoid environmental destruction. Huge number of population needs infrastructure, food and water. However, the capacity does not meet to fulfill the demands.

Therefore, it leads to destruction of nature, forests, sea level and rise in temperature.
