

Climate Change: Causes and Consequences

1. Introduction:

1.1 Attention Grabber

1.2 Background information

1.3 Thesis statement

2. Causes of Climate Change in Pakistan

2.1 Deforestation poses threat to biodiversity

2.2 Rapid urbanization and improper use of agricultural land

2.3 Generation of massive solid waste without proper management.

2.4 Heavily reliance on fossil fuels for energy production

2.5 Use and development of weapons of mass destruction.

2.6 Weak policy framework on carbon emission

3. Consequences of climate change in Pakistan

3.1 Melting of glaciers

3.2 urban flooding and damage to infrastructure

3.3 Rising sea levels

3.4 Degradation to agriculture land

3.5 Increase in poverty levels.

3.6 Increase in food insecurity.

4. Some suggested measures to mitigate climate change.

4.1 Large-scale reforestation initiatives.

4.2 Promotion of clean energy sources instead of fossil fuels

4.3 Implementation of proper solid waste management system

4.4 Strengthening environmental laws and enforcement mechanisms.

5. Conclusion

The Thirteen Tourist Had Died Due to Drowning in the Flooded River Swat on 28 June, 2026.

The thirteen tourist had died due to drowning in the flooded river swat on 28 June, 2026. They were all tourist who were taking their breakfast.

A sudden rose of water in the river due to heavy rainfall over the following two days. All the thirteen tourists lost their lives confirmed by rescue team. After the independence of

Pakistan, its climate was not severe as it is nowadays. According to research of France university students, Pakistan will more likely to face droughts and flash flood in next twenty years. However, Pakistan government still did not made any better policy to safeguard its people/citizens. Unfortunately,

Pakistan has been facing these situations due to massive deforestation, usage of fossil fuels for power generation, rapid urbanization on agriculture land, use and development of weapons, and having fragile policy on carbon emission by companies and industries.

Therefore, It caused havoc impacts on melting of glaciers, damaging of urban cities by flash floods, damage of agriculture land, poverty, food insecurity. However,

Pakistan can adopt measures to safeguard the country interest through reforestation done on massive level, implement a proper waste management system, shift to clean energy, and by imposing heavy fines those are responsible for carbon emission beyond limits.

Day: _____

Date: _____

To begin with, Forests constantly falling prey to wildfires worldwide. According to UN report, it stated that 906,000 hectares land of amazon forest ruined after recent wild fire. It became the cause of 8% carbon emission of one year. Moreover, It is one of major causes of deforestation due to an increase in temperature worldwide about 1.8°C . Secondly, trees has been using in the production of papers. As FWO stated that 40% of the wood goes for paper production worldwide. The requirement to produce 1 ton paper can require 24 trees. Consequently, The area of forests ^{decreasing} worldwide. In the last, woods have been using in making furniture especially in china, America, UK, India, and other economy powers. It is a 900 billion dollars industry. The furniture built worldwide annually using 20% of trees that cut every year. Every year 70% of furniture made by wood. Therefore, deforestation has contributed to climate change which can cause different ~~repercussions~~ problems to our country.
