Day: _____

Reforestation As A Global Urgency.

① Introduction

"Deforestation is increasingly rapid in the world and it directly impact on climate. The change of climate has brought a lot of problems. It is a severe threat to the basic sources of life. Reforestation is the only solution for the emerging problems. The government should take measures for boosting the reforestation."

② Why the reforestation as a global urgency.

3 Impact of deforestation over the world.

- (a) Directly impact on climate.
- (b) Emergence of the various types of diseases
- (c) Loss of various types of species
- (d) The loss of vegetative cover in

Date: _____

Day: _____

the world.

(e) Occurance of natural disaster in the world.

(f) Emergence of social and economic problems in a society in the world.

(3) Impact of reforestation in the world.

(a) Presence of the absorber of GHG in the world.

(b) Elimination of various diseases

(c) Preservation of basic sources in the world.

(d) Availability of the food in the world.

(e) Provision of survival places for the various species.

(f) Eradication of social and economic problems

(4) Measures for the resolution restoration of reforestation.

(4) Legislation at national and international level for the preservation, restoration of and increment in vegetative coverage.

- Date _____ Day _____
- (b) Awareness about the importance of plantation at local level.
 - (c) Institutional efforts should be encouraged for the plantation.
 - (d) Implementation of punishment for the deforestation.
 - (5) Conclusion.

The news about climate change is become the kernal topic of the news-paper. The climate analysts try to find the cause of climate change. The basic cause of the climate change is the absone of massive vegetative cover in the world. Deforestation, directly impacts on climate change. It becomes the cause of the emergence of various social, economic problems. Occurence of the new diseases, disaster and less of various species are the consequences of the climate change.

Trees are the most crucial part of the world

The world is required

Date:

Th.

Day:

is required 31 pc of the ~~tree~~ total vegetative covered areas. After industrial revolution people prefer to build industries over vegetative covered areas. Rapid ^{growth of} urbanization and industrialization are the most important cause for deforestation. The trees are going to be decreased. According to research 15 bn. trees are cutting down each year. The concentration of lethal gasses is going to be increased. Various kinds of social, economic and health issues are occurring due to the less amount of vegetative cover. Reforestation is the only solution for resolving these issues.

Why the reforestation is become a global urgency. There are various kinds of problems are emerging due to the deforestation in the world. The one of the most important impact of deforestation in the world is climate change.

Climate is directly and indirectly impact on the human lives. The people are directly impacted by its changing. It becomes a threat to not only for a specific location but it also impacted the whole world. "Climate change does not specific for a certain region or a country it leaves its impact on the whole world. It is a global challenge (Antonio Guettress, Sep. 2022). Its impact on the world can be observed through the variation in the global temperature. The global temperature is rising annually, as according to world meteorological department the global temperature is increasing 1.5°C annually from its previous year. Therefore, the climate change is one

Date: _____

Day: _____

of the phenomena which occurs due to deforestation.

The climate change also raises various kinds diseases.

In the world, Deforestation is the major causes of some disease.

The trees are the basic source of the purification of air. They absorb Green house gases. When the gases are not absorbed through vegetative cover then various kinds

of diseases occur. Smog which occur during winter becomes the cause of lungs' damages. The

children are most vulnerable creature. They suffer from asthma, bronchitis problems and lungs, in winter. The heat

are in ~~the~~ summer impact on the brain and heart. Therefore the absence of the vegetative cover impact on the life of human beings.

Deforestation does not only impact on the life of human beings it also impacts

on the life of species. It impacts on both aquatic and Terrestrial life. The species have lost their habitative place. Some of them are not exist in the world. As, according to world Wild life report, "many types of species are decreasing in their number only because of the loss of vegetative cover in the world.

The loss of less vegetative cover disturbs the amount of Ozone and nitrogen gas in the atmosphere.

They become the cause of the plankton over the seas upper layer which prevents the light and oxygen in the water. It become the cause of the death of the marine life. "A million fishes are dying in Newzealand in 2024.

The major cause of the death of fishes is the presence of plankton over the sea. Hence, the absence of less vegetative cover become the major cause of the loss

Date: _____

Day: _____

of various types of species in the world.

The less vegetative cover does not only impact on the life of animals and human beings through diseases or loss of habitats. It also becomes the cause of the natural disasters, and The natural disasters are increasing in number after the industrial growth. As the 21st century brings innovation in the life of human beings but it also become the causes of raising the occurrence of flood and droughts in the world. The phenomena of wild fire occurring each year due to climate change. The severe natural disasters occur due to the absence of the less vegetative cover in the world. It brings both social and economic losses in the society. As the flood has effected the economic of Pakistan. be-

mes the cause of the loss of \$2 bn. The floods are occurring not only the melting of glaciers they are also occur due to cloud burst in various region. The cloud burst in Chakwal also become the cause of flood in 2015. So, the less natural disasters are also the main product of the climate change and deforestation.

Forests is the basic source for livelihood. People does not only earn money through Forests' product but also get food. The people get food from forests. The elimination of forests through natural or anthropogenic activities deprives a lot of people from the employment. The wildfire in 2023 deprived thousands of people from employment. They had lost their basic source of income. (Al-Jazeera).

The less vegetative cover also become the cause of the emergence of social problems like crime and defrust-

ration in society. Tree is the basic source of food. The absence of the thick vegetative cover is the basic cause of the social problems like hunger and social crimes in society. So, the deforestation impact on the social and economic life of the human beings.

The reforestation is the only solution for existing problem in society. Reforestation can solve the problems. The deforestation creates pollution. Reforestation can provide a place for absorbing the lethal concentration of gases. The trees use the carbon dioxide and release oxygen. The vegetative cover absorb the carbon dioxide. The reforestation is the only solution for the absorption of the green house gases. Therefore, the reforestation is the only solution for the balance of the green house gases in the atmosphere.

(Forests are the problem of the world).

Date: _____

Day: _____

Deforestation pollutes the environment which become the cause of the deaths of lot of people due to the occurrence of diseases. The Smog is one of the phenomena which occur due to deforestation. Smog is the cause of the breathing problems and lungs issues. The presence of forestation provides a space for the purification of air. The trees produce a huge amount of oxygen which and absorb the lethal gases in the atmosphere. In this way the lethal suspended particles in the atmosphere does not effect the atmo. human beings.

Trees are the basic source of the food. The trees provide various kinds of fruits and dry fruits. The starvation and hunger is one the global problem in the world. With the loss of tree the world also has the shortage of food. The plantation of tree provides food for both human beings and

Date: _____

Day: _____

and animals. The trees are the basket of foods. The reforestation can solve the problem of the world. The plantation of tree may helpful for the controlling the climate change's impact. Climate change occurs due to the presence of the huge concentration of gases. Reforestation help in improving climate which will prove helpful in the growth of the food in the world.

Deforestation is the cause of occurring natural calamities which will leave drastic impact on the growth of the economy of the country. Reforestation can solve the economic and social problems of society. They may help in improving the economic condition of the country. The availability of the excessive amount of food may helpful in lessing the effect of inflation in the society.

Tree produces food which may

export to other countries and the large amount of the availability of food can fulfill the basic need of the country. In this way the ^{restoration} Reforestation is the basic solution for emerging the social, and economic problems of society.

Reforestation provides the place of living for the the various kinds of species. The various types of species are going to be finished in this world. The loss of the various vegetative cover become the cause of the disturbance of a balance ecosystem. The Reforestation can save the existing ^{ance} of the species. This action can save the balance of the ecosystem because the species find the stable environment.

Various Measures can be adopted for the restoration of forestation. Trees are the most essential element of the world. The first and

Date: _____

Day: _____

and most crucial is the legislation for the forestation in the world.

The legislation should be adopted at national and at international level for the restoration of tree. The international organizations like UNO and ~~cap~~ other climate organization should set goals and criteria for the world's countries. The countries also try to do legislation for the reforestation and controlling the other anthropogenic activities which are becoming the cause of the deforestation. In this way the global forestation can be restored through national and international legislation.

The importance of vegetative cover should be promoted through public use of both electronic and print media. The people should be aware about the importance of tree. Various seminars and campaigns of plantation should be spread among the public. As the one

Date: _____

Day: _____

tree provide ^{only few} four people in a day. They save their lives themselves. In this way the people can do plantation.

The government should do efforts for the encouraging the plantation. Institutional efforts of plantation should be encouraged by the government. The encouragement is very crucial for the doing of anything when the institution achieves reward or other good rate about institution then the other institution will also do for the sake of the good rate of the institution. In this way, the government plays its indirect role in plantation and restoration of the forests.

The government should impose strict punishment about the deforestation. As the fear of punishment will decrease the ratio of deforestation. It should be treated as like a crime.

Date: _____

Day: _____

As the government should impose fine and other heavy punishment for the person who ^{will} established through clearing the area of the forestation.

The punishment will play role as a shield for the protection of the tree. In this way, the forestation can be restore restored through the imposition of law and punishment.

To be concluded, we the world is facing various drastic problems through the deforestation. The people are facing various economic, social problems due to the occurrence of the deforestation in the world. The temperature is rising, glaciers are melting, that the increment in the intensity of the natural disasters' occurrence. These are directly impact on the social and economic development indicator in the world. The people are affecting various kinds of

Date _____

Day _____

of diseases due to the presence of pollutants in the air. The solution of the elimination of the problem like economic, social and ~~the~~ is the reforestation in the world. The trees are the good absorber of the pollutants of air they provide food and improve the quality of air in the world. Various measure should be adopted for the reforestation. The government should promote the efforts of plantation and legislation for plantation at national and international level. Institutional efforts of plantation should be promoted through reward and implementation of punishment for the deforestation. Hence the quality of air will improve which will improve our social and economic and problems.
