

Assignment

"CLIMATE CHANGE IN PAKISTAN: Causes And Consequences"

Brainstorming

Outline

1- Introduction:-

- 1.1 Hook
- 1.2 General Statement
- 1.3 Thesis Statement

2- Climate Change in Pakistan

3- Causes of Climate Change in Pakistan

- 3.1 Overpopulation
- 3.2 Domestic Environmental Mismanagement
 - 3.2.1 Deforestation
 - 3.2.2 Inefficient Use of Energy
- 3.3 Agricultural Practices
- 3.4 Industrial and Vehicle Emissions
- 3.5 Nuclear Incidents.

4- Consequences of Climate Change in Pakistan

- 4.1 Extreme Weather Events
 - 4.1.1 Floods
 - 4.1.2 Droughts.
- 4.2 Water Shortage
- 4.3 Health Impacts
- 4.4 Agricultural Disruption
- 4.5 Coastal threats.

5- Way forward

5.1 Renewable Energy Change.

5.2 Water Resource Management

5.3 forest and ecosystem restoration

6- Conclusion.

∴ The Essay ∴

Barack Obama said, We are the first generation to feel the impact of Climate Change and the last one that can do something about it. Climate Change has emerged as one of the most pressing global challenges of the 21st Century. Pakistan ranked consistently among the top ten most climate-vulnerable countries by the Global Climate Risk Index. In 2022, one-third of Pakistan was submerged under floodwaters, affecting 33 million people, a human tragedy is strengthened by climate change. The Causes of Climate change are over-population, deforestation, inefficient use of energy, industrial and vehicle emission, unsustainable Agricultural Practices, global greenhouse gas emissions and nuclear incidents etc. On the other hand, Consequences of climate change in Pakistan are floods, droughts,

water shortage, agricultural disruption, health impacts, economic losses, coastal threats etc. To overcome the present situation of Pakistan, some steps should be taken like water resource management, forest restoration, ecosystem restoration, strengthen climate governance, promote renewable energy resources and promote climate smart agriculture processes.
