

Topic: Climate change and the role of youth

Youth can play a crucial role in mitigating and reducing the climate change. Climate change is a phenomenon which is caused by the excessive emission of carbon by burning fossil fuels, deforestation, and emission from industries. Youth generation can play its part to combat the climate change. Firstly, the emission from vehicles contribute to climate change in very large extent, therefore, youth can avoid the unnecessary use of vehicles and use the public transport. Secondly, youth can shift the use of excessive fossil fuels to renewable energy by developing advance technology. The burning of fossil fuel led to 78 percent carbon emission to the atmosphere. Thirdly, youth can collectively take part in government initiatives such as Billion Trillion Tsunami and Clear Air initiative. Youth can also take part in the rescue operations of government during the natural calamities caused by climate change. Furthermore, the social and political distress cause in the society due to climate change; youth can play a vital role in educating and spreading awareness regarding climate change. In conclusion, youth can play a significant role in mitigating and reducing the impacts and causes of climate change individually and collectively.
