

Name:- Sana Bhutto
Subject: English Essay
Assignment on:-

Batch # 81

Brainstorming and Outline On:- Climate Change in Pakistan causes and consequences

Brainstorming

Climate Change

Causes

Consequences

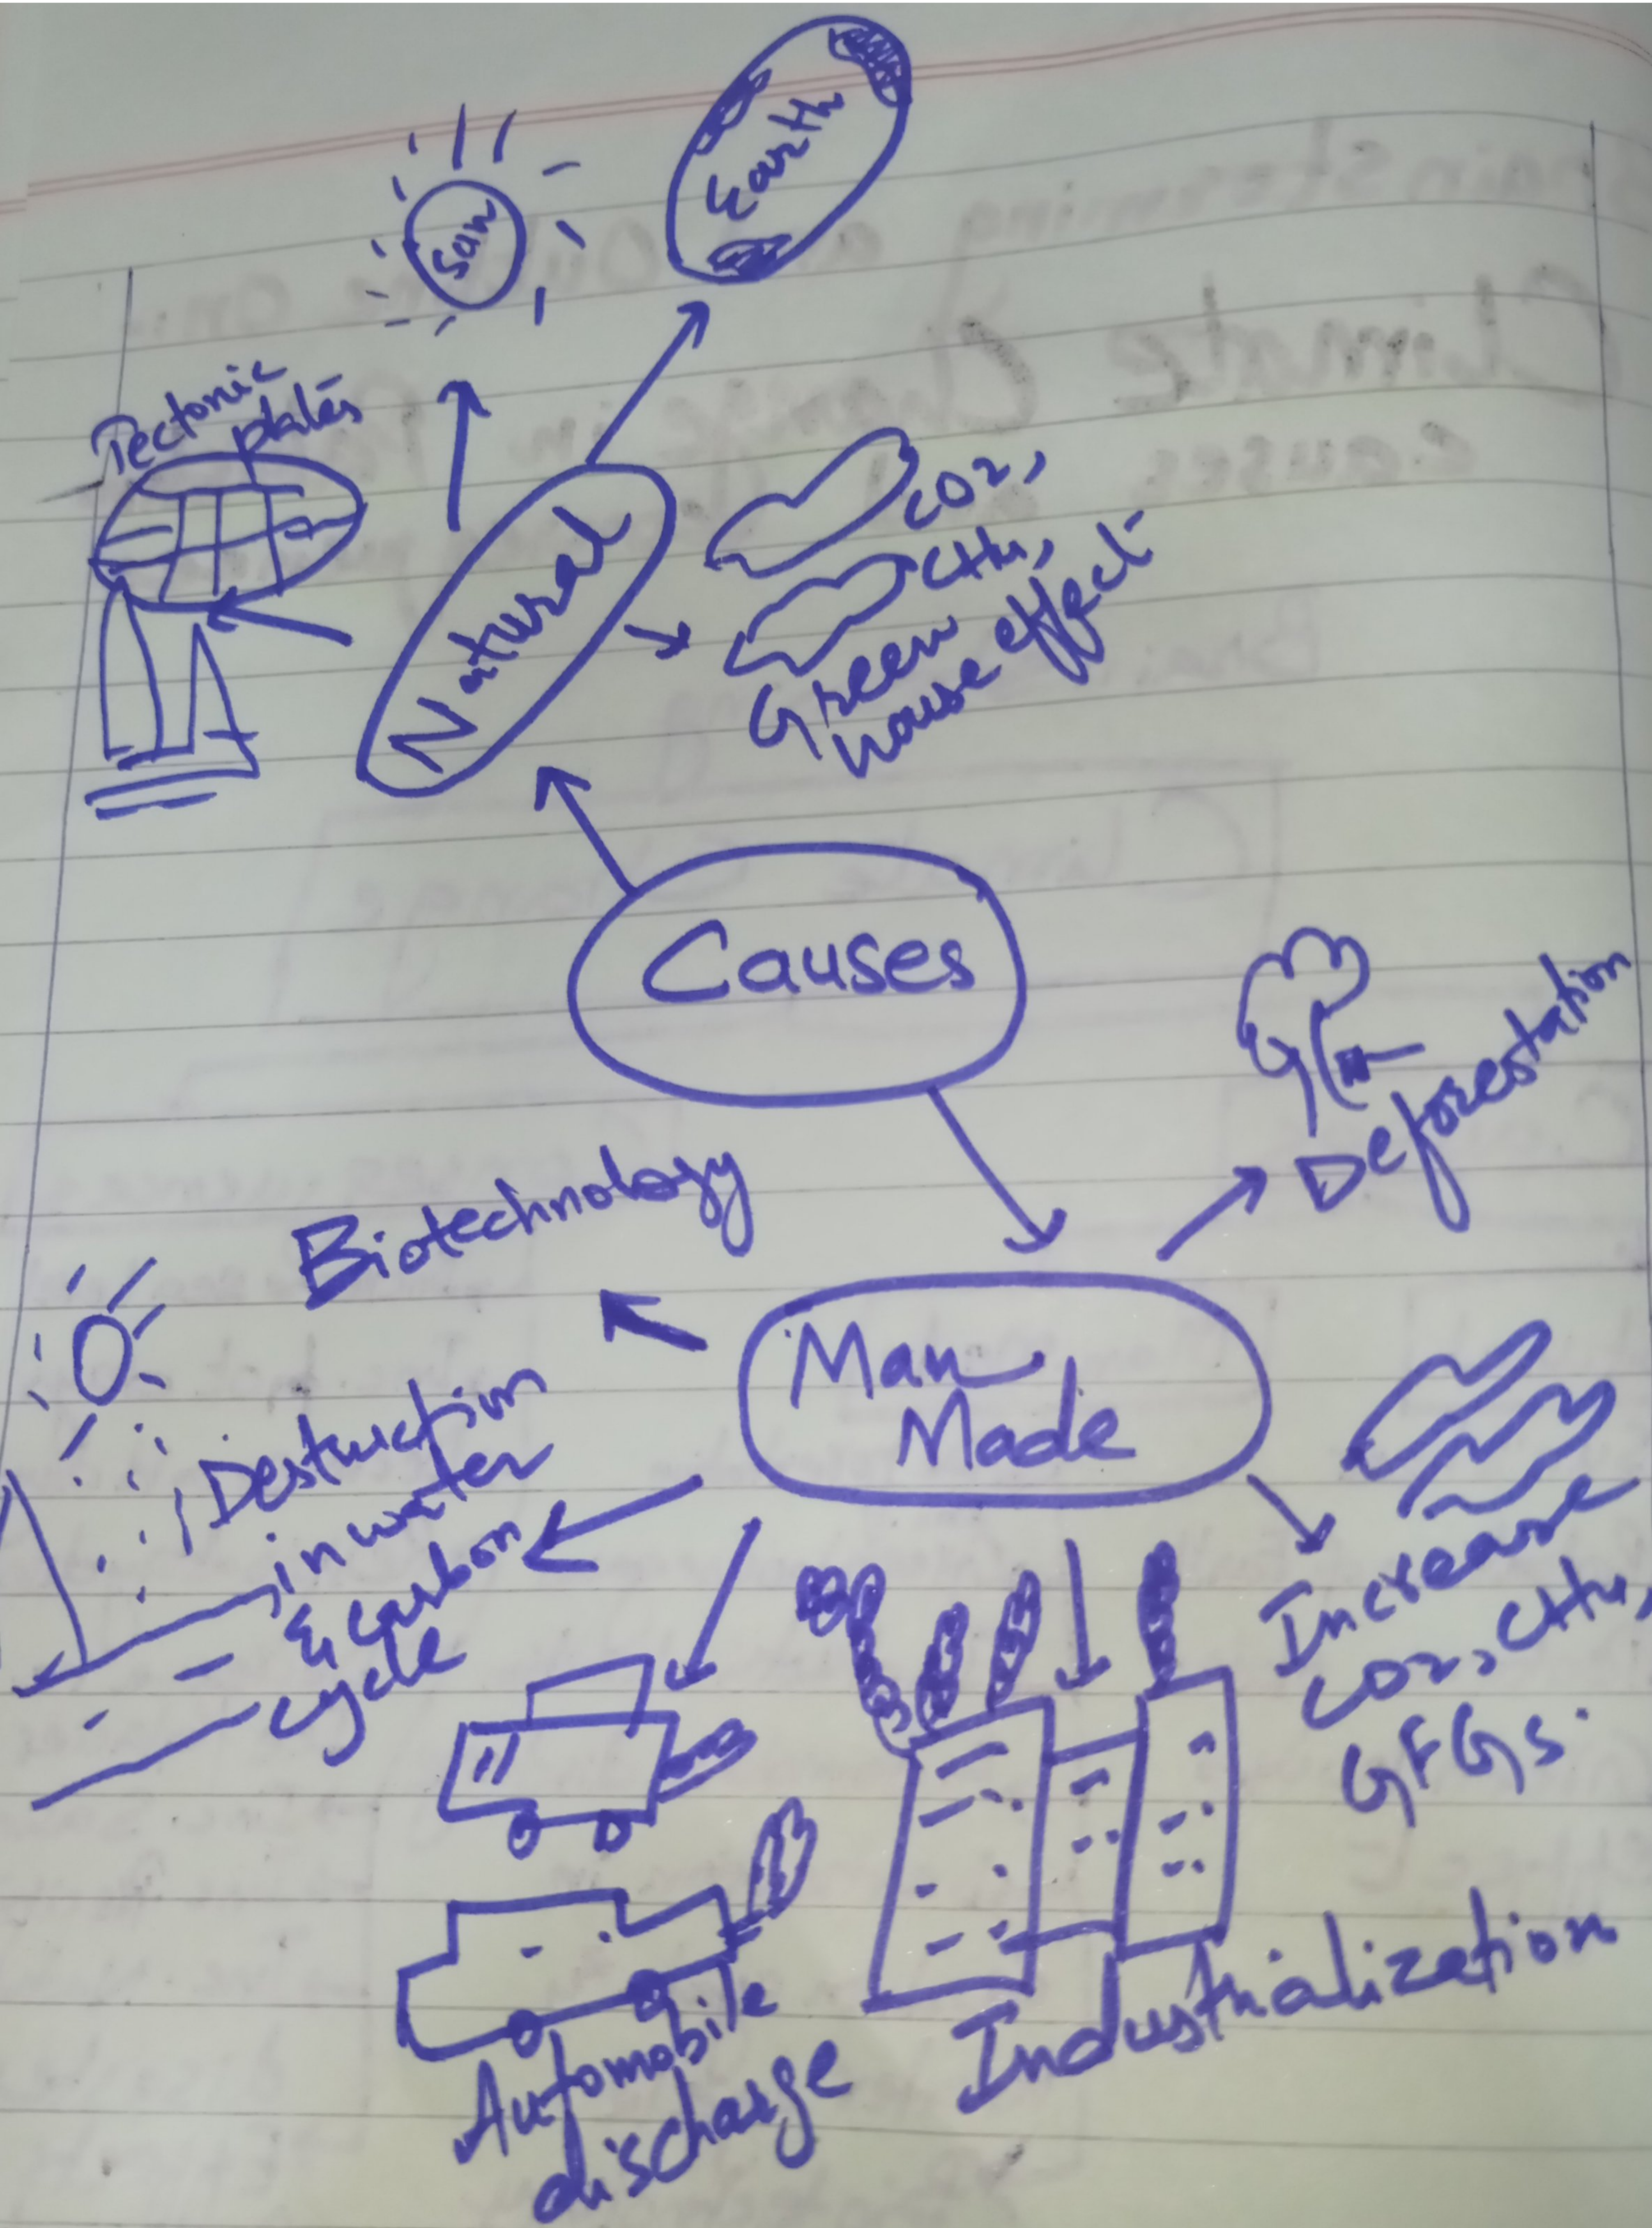

Natural

- Sun's heat
- Rotation of Earth
- Tectonic plates
- Green house effect

Man-Made

- Deforestation
- Inc. Green house gases
- Industrialization
- Automobile discharge
- Destruction in carbon cycle & water cycle
- Biotechnology

- Increase sea level
- Inc. hot days
- Decrease cold days
- Respiratory disease
- Decrease in Ice / Glaciers
- Inc. Salinity
- Inc. Precipitation
- Inc. Natural disasters
- Effects on Agriculture

Outline

1. Introduction

1.1 Hook statement

1.2 Background statement

1.3 Thesis statement :- Climate change

in Pakistan is caused by various factors including natural factors such as Earth's tilt, Sun's heat, energy from tectonic plates and the natural process of green house effect which captures the heat from Sun to the atmosphere of Earth. Other factor is man made which consists of the new technologies for the welfare of human being but has also negative impact on the health of all living beings such as deforestation, increase in green house gases, industrialization and so on. These causes so many impacts such as health diseases, increase in sea level, decrease

in glacier's ice, increase in hot days and decrease in cold days. The main impact of climate change in Pakistan can be seen by the floods of 2022 which caused so many destruction of human lives, their shelters and many more impacts.

2. Main Body

2.1 Natural causes of Climate Change

- 2.1.1 Sun's heat towards Earth
- 2.1.2 Changing in the rotation of Earth
- 2.1.3 Energy released from tectonic plates
- 2.1.4 Green house effect

2.2. Man Made causes of Climate Change

- 2.2.1 Deforestation
- 2.2.2 Increase green house gases.

2.2.3. Industrialization

2.2.4. Automobile discharge

2.2.5. Biotechnology

2.2.6. Destruction in carbon cycle

2.2.7. Destruction in water cycle.

2.3. Consequences / Impact of Climate Change in Pakistan.

2.3.1. Increase Sea level

2.3.2. Increase hot days

2.3.3. Decrease cold days

2.3.4. Respiratory diseases

2.3.5. Decrease in Glacier's / Ice

2.3.6. Increase Salinity

2.3.7. Increase Precipitation

2.3.8. Increase natural disasters

2.3.9. Effects on Agriculture.

2.4 Adaptations

3. Conclusion.
