

"Climate Change in PAK"-

→ **outline:** Properly follow the structure of outline

Causes: Write the outline in a formalized manner

1- Natural & Global:

- Green house gas emission - *Avoid short cuts*
- Melting of glaciers - *Write your main heading in a proper manner*
- changes in monsoon pattern -

2- Human induced:

- Deforestation
- Rapid urbanization -
- Transportation & Industrial Pollution -
- overuse of fossil fuels -
- Poor water management
- Population growth -

3- Agricultural Activities:

- overuse of chemical fertilizers -
- Burning of crop residue -

Consequences:

1- Environmental:

- Flooding due to melting of glaciers
- Sea level rises
- Heat waves due to extreme weather change
- Desertification & land degradation

2- Social & Health:

- Heat stroke & other illnesses & deaths due to heat stress
- Spread of viral diseases (Malaria, dengue) due to changing rainfall & humidity
- Disturbed livelihood due to energy crisis

3- Economical:

- Loss of agriculture → Food insecurity
- Damage to infrastructures
- Increased poverty in rural areas

4-Political:

- stress on governance & disaster management systems-
- Increased dependency on international aid-
- Internal migration → Pressure on cities-

Introduction:

Avoid 1st person pronoun
 Properly integrate your
 attention grabber with the
 rest of the paragraph
 Atleast write thesis
 statement in the
 introduction

During a climate change summit held on 23-sep-2019 by secretary general of UN Antonio Guterres says

The climate emergency is a race we are losing-

As in 2022 Pakistan faced the worst flood in their history, one third of country went under water, 33 million people were affected. Entire villages in Balochistan &

sindh disappeared- UN called it as A Monsoon on steroids-

Unfortunately, Pakistan is facing problems ~~due~~ to climate change

~~These~~ caused by natural & global factors, human induced factors & different agricultural activities- These causes led to severe consequences, related to environmental (floods, rise of sea level), Social & health (Heat stroke, Malaria, energy crisis), Economical (Food insecurity, Damage to infrastructure) & Political (stress on governance, increasing dependency on international aid.)-

Unless Pakistan addresses these causes, Pakistan will never be able to overcome these consequences-

Take punctuation into consideration

Adopt a formal writing style
