

Amid busy and noise polluted cities, green spaces are vital to become havens for relaxation and respite, they create balance between urban development and environmental protection. Moreover, parks are important for social gatherings and individual's solace. Green spaces are also environmental and climate friendly which result in mental and physical health of masses. Maintaining balance between ~~subject~~ urbanisation and green spaces is challenging. However, sustainable planning is required in shaping new cities to ensure human's and environmental health. It becomes a shared responsibility with the emerging cities to prioritise sustainable cooperation between human's evolution and environment.
