## Demerits of Technological World

In the world of exploration and discovery whatever is being discovered has lost its true meaning. As, it is evident from the fact when Darwins come up with the theory of "Survival of the fittest". Some of the Scientist interpret the meaning of fittest as physical world and ignored the cultural one. Psychologist emphasized Psyche and ignored physical and cultural world. This led to the creation of materialistic world where there is no space for love, sympathy or emotions. In this journey of technological invention men entirely block growth of men in cultural terms. In this world Scientists are ~~not~~ utilizing nature and favouring their leaders who use it to cause destruction and fear among people. In all this situation true relationship between spiritual world and humans has been completely diminished.
