

Paragraph Writing

Women is the name of frailty

This is a phrase, originated from famous writing of Shakespeare, Hamlet. This interprets physical weakness, emotional sensitivity and lack of endurance. In this era, there is no link between frailty and women, due to contributions in every sphere of life.

In history, there were societal restrictions like domestic roles, lack of opportunities to contribute in economic, political, social, Educational domains. But frailty is misinterpreted virtue because it has no any link with gender. In recent era, there were forced silence and dependence of women on men. Females expressed their feelings openly, which is little bit emotional sensitivity not weakness. Due to it, females foster or reinforce their relationships, resolve conflicts and get emotional stability and peace.

There are a lot of evidence that women have remarkable patience, endurance and resilience

Proving that it is flawed assumption.

Childbirth, shows that women is not fragile but physically strong and emotionally strengtheners. Uplifting dual burdens of household as well as contribution in economy showed her patience, contribution in society, perseverance and managerial abilities.

Social media like dramas, series also show stereotype approach, that women are delicate by nature. But strength and weakness are traits of human not gender specific.

Womens also played extraordinary services in political domains. For example, Fatima Jinnah, Benazir and Malala Yousafzai

In present days, womens are taking an active role as Strategist, nurses, doctor, fighters and administrative officers. The wave of feminism does not mean that women are superior to men but no more name of delicacy and fragility.
