

Outline

Topic: Climate Change Causes and Consequences

Introduction

- 1- What is climate change?
- 2- A real threat for life existence.

Causes of Climate Change:

- 1- Burning of fossil fuels.
- 2- Greenhouse Gas Emissions.
- 3- Deforestation.
- 4- Industrial Activities.
- 5- Agriculture and Livestock.
- 6- Transportation
- 7- Explosion of population.

Consequences of Climate Change:

- 1- High Average Temperature.
- 2- Extreme Weather Conditions.
 - Severe Floods / Drought / Heat Waves.
 - Sea level Rise.
- 3- Health Issues
 - Increase in Viral Diseases.

→ Increase in Physical Abnormalities of People.

4) Impact on Agriculture

→ Reduce land Fertility

→ Less Rainfall.

5) Ecosystem.

→ Disasters Impact on Marine Life

→ Disappearance of Species.

→ Forest Fires.

6) Water Scarcity

7) Mass Migration of People .

8) Ozone Layer Depletion.

9) Economic Issues.

10) Developing Countries as a Pollution Heaven .
