~~4.7)~~

5- Hindrances to online learning

6- Solutions to remove hindrances in the path of online learning

7- Conclusion

In this age of internet and digital applications, learning is just one click away. Around the world there are billions of users of smart phones and digital gadgets which they can use to easily access learning. Online learning is a convenient form of education which defies traditional methods of class room instruction. Prior to the age of internet, traditional mode of education such as, strict class room discipline and sitting for long tiring hours to attend the lectures. Now with digital literacy, one can avoid such cumbersome procedures and still, get educated. Moreover, online education is more effective than traditional education due to various reasons. Online education through digital platforms.

has variety of courses which would not be, even, ^{part} ~~present~~ of traditional institutional learning. It is easy to access due distance learning through internet. Online education contain great exposure to great teaching faculty, especially, directly from contemporary philosophers, scholars, scientists, engineers and doctors etc. In addition, online learning is more population inclusive and could reduce the learning gap created by elite private institutions. Apart from its effectiveness, online learning defy the norms of ^{traditional} classroom instruction which causes mental retardedness among students. It is also not approachable to many student who lack financial capacity for transport and

(3)

academic institution that are costly - Moreover, traditional classroom education rely heavily on school infrastructure which is often in dismal situation in third world countries. ~~However,~~

Although online education is better form of learning, but it has certain limitation which causes hindrances in education. These issues need to be addressed to culminate an inclusive online education approachable to all classes.

In addition, online learning is more convenient, approachable, costless and nuanced which make it more effective than traditional classroom education.

Online learning is a modern day concept of getting educated. It rely on the internet and digital application that are

⑨

used by the people for the purpose of education. Moreover, online learning does not require huge cement infrastructures and strict classroom timetables. A student can any-time and any-where, with just a smart screen and internet, receive the best education in the world. For instance, institutes such as Harvard and Stanford, leading education in the world, have their top courses uploaded on the internet. Any person interested in those courses can access it without ~~the~~ the need of huge costs and visa barriers. Thus, online education is universal and more inclusive than traditional classroom learning.

On the contrary,

traditional education has
pertains many issues which
restrain learning. ~~But~~ It
include large school infrastructure,
heavy fees, transport issues
and cumbersome disciplinary
measures. Traditional classroom
learning require the students
to sit for long tiring
hours to attend the lecture,
including harsh winters and
summers, especially in third
world countries. Students also
have to bear poor school
infrastructure and transport
system. As in Pakistan, for
instance, many ^{public} schools lack
electricity and washrooms. Other
don't have necessary transport
systems, thus, students have
to walk miles away to get
educated. These issues in
the traditional education
systems, make it hard for
people to get equally educated.

That is why, online education is more effective than traditional classroom instructions. As it includes distance learning, better teaching faculty, nuanced courses and is more inclusive form of education. Moreover, online education is cost effective and ~~avoid~~ does not require transport or travelling. In addition, it removes the burden of disciplinary measures in traditional classroom learning which causes mental fatigue in students.

Among the very effectiveness of online learning, education can easily be received through distance learning. It means, one can get educated sitting at home with the

help of smart gadget such as Ipad, laptop or phone and the internet. It frees people from travelling to schools or colleges or migrating to other cities or states in the pursuit of education. For example, the famous Khan Academy or BYJU'S provide fruitful education to students on their Youtube platforms, that too, free of cost. In this way, a student not only acquire better education but also avoid tiresome movement to get the education.

Besides distance learning, online education also contain the best of teaching faculties. That is because, from all over the world, bright minds use the opportunity of

(8)

modern day technology and can easily access huge number of students. In this way, student gets acquainted with the most intelligent people who teach on the internet. Jordan Peterson, Warren Buffett or Slavoj Žižek, for instance, spread their ideas and education from their respective field on the internet. Nonetheless, they are among the top scientists, scholars and philosophers of the 21st century. Getting exposed to their teachings directly because of the internet, is a great blessing to students. All this is because of the amazing features of online learning which make it possible for the ideas of

great teachers to travel across the world.

In addition to better teaching faculty, online learning also has variety of courses for the students to learn.

This feature could not be available in many parts of the world through

traditional learning. Because of the financial cost, lack of specialists or socio-cultural restriction not every course is available on the university sites or educational institutions.

However, the internet has all modes of courses which the student could use to their benefits. In

Afghanistan, for example, women or girls' education is

banned to socio-cultural and religious reasons. However, online learning provides the

Afghan woman to get educated any way and transform their society. Because "an educated women give birth to an educated generation". Therefore, online learning is an effective form of education by catering the needs of education of all classes and segments of society.

Apart from all the other aspects of online learning, it is more inclusive than traditional education. Online education could reach a huge network of people through the medium of internet and digital gadget. States can utilize it to educate those vulnerable children unable to acquire education for any reason.

(11)

For instance, Pakistan has 27 million out of school children according to the Dawn. These children are not able to get education due to poverty, child labour, and lack of schools and teaching faculty. If the state could efficiently utilize online learning and provide smart tablet, programmed specifically for learning, and internet to the families of these vulnerable children, then, they could all get educated. Thus, online learning is more inclusive in its approach of learning than traditional classroom learning, available to the blessed ones!

Moreover, online learning removes from students the burden traditional classroom disciplinary measures.

In traditional classrooms, students have to abide by the discipline of class such as, sitting many hours though fatigued to attend lectures. Otherwise, if the student does not attend the class, he could miss the opportunity of important lectures. However, in online learning, this problem does not exist. Students can take productive breaks for recorded series of lectures and can attend their lectures in more flexible hours. This makes education and learning more convenient as students from any class of the society can get their education, especially those bearing the responsibilities of home. For instance, a platform in Pakistan called Nearpeer offers quality

education to those preparing for CSS through recorded courses. This allows aspirants from any background prepare for their exam efficiently because of online learning.

Besides removing the burden of discipline, online learning prevents mental fatigue and boredom caused by traditional classroom instruction. Because online could include the use of visual graphics which make education interesting and more retained. For instance, according to memory scientists such as Huberman, visual memory increases memory retention. For such as, if a student is learning the movement of electrons in the atom or its magnetic field, it could be hard for

(14)

him to visualize the scenario. However, if he is shown video graphics of such concepts instead, it would ease his understanding and make him retain the concepts for long. Although this feature is hardly available for each concept in a traditional classroom learning which make online learning stand out in the matter. In this way, learning remain engaging and more productive.

Despite having many effectiveness, online learning also has some hindrances which deprive a great section of students from reaping its benefits. Firstly, online learning lack that physical intouch between the student and teacher which allow both the

⑤

parties to exchange their view simultaneously in between the lecture. This leave the students unattended and their queries remain incomplicated. Secondly, many of the students due to socio-economic conditions could not afford the internet and digital gadgets to ~~get~~ engage in learning. For instance, according to the World Bank, 44% of Pakistan's population is living under extreme poverty. In this scenario, children from this poor class is unable to afford the technology & necessary for online learning. This leaves them vulnerable to technology and education gap and online learning remain for them a distant dream.

In order to remove

and make education more inclusive and productive; states need to take effective measures. It should be the responsibility of states to provide the people the tools necessary for online learning. For instance, in Finland, which topped the world's education index 2024, provide E-learning tools to students. This make education in Finland very inclusive. The similar measures could be taken by the third world countries such as Pakistan, Bangladesh, Nigeria etc to provide internet and gadgets for to their people for online learning. Thus the resolution of hindrance to online learning, could increase literacy in these

states and lead them to a brighter future.

In conclusion, online education — a digital form of learning, is a convenient and better education. On the contrary traditional classroom instruction causes burden, fatigue and boredom in learner. Moreover, online education does not require travelling and ~~so~~ infrastructure for education and learning. It requires only the literacy of using internet and digital application, in addition, both of these tools to engage in learning. Moreover, online education ~~and~~ could embed the best teaching ~~face~~ expertise, material and conditions that are detrimental to productive education.
