

Outline

1. Introduction:

Lewis Gordon Pugh says on climate change "Climate change is the Everest of all Problems, the thorniest challenges facing humankind." So, climate change is neither a new issue, nor is it a fully settled one. Developed nations are dealing with it successfully, whereas developing nations are still struggling. Unfortunately, Pakistan is also one of them. The major causes behind climate change are generating power, manufacturing goods, cutting down forests, using transportation, producing food, consuming too much which result in hotter temperatures, more severe storms, more health risks, not enough food, loss of species.
