Climate Change: Causes & Consequences

I. Introduction.

- What is climate change?
- How various factors influence it.

Thesis

Humans seems to be well for the place they used to live. These habits and actions of past are now dictating today's climate. In this essay, a detailed list of causes and consequences of climate change will be discussed. Moreover, in the later parts, some solutions to this change and Pakistan's current climate change situations will be presented.

II. Understanding the concept of climate change.

- (a) Climate change is leading us to extreme weathers.
- (b) Headache for entire world.
- (c) Situation of 3rd World countries, like Pakistan, India & Bangladesh etc.

III. Main / Major causes of climate change.

- (a) Transportation — obsolete vehicles, usage of individual transport.
- (b) Industries — industrial effluents containing hazardous chemicals, brick kilns, glue gases.
- (c) Agricultural residues — their burning at large scale.
- (d) Deforestation — link of climate change to

cutting down of trees

IV- Implications of the above causes on climate.

- (a) Extreme weather conditions — intense summers and winters, glaciers melting, ~~stiff~~ floods, etc.
- (b) Health problems — skin cancer, new diseases.

V How to control the climate change?

- (a) Green practices — promotion and usage of e-vehicles, public transports, rather than the individual one's, ~~the~~ adoption of green energy production ways etc.
- (b) UN involvement — pressurizing developed and developing countries, in controlling the climate change, focus on sustainable development goals (SDG's).

VI How climate change affected Pakistan in recent years?

- (a) Extreme floods in Punjab and KPK.
- (b) Torrential rainfalls, thus damaging infrastructure at large.
- (c) Plea to UN for controlling this climate change.

VII Conclusion
