

Climate Change: Causes and Consequences

1. Thesis Statement: The major causes behind climate change are: burning of fossil fuels resulting in greenhouse gas emissions, deforestation, industrialization and urbanization, agricultural practices and unsustainable human consumption. These causes result in these consequences such as: extreme weather events, water insecurity, agricultural and food crisis, public health challenges, economic losses and social displacement.

2. Causes of Climate Change:

- (a) Burning of fossil fuels
- (b) Deforestation
- (c) Industrialization & urbanization
- (d) Agriculture practices and ~~unsustainable human consumption~~
- (e) Unsustainable human consumption

3. Consequences result in Climate Change:

- (f) Extreme weather events
- (g) Water insecurity
- (h) Agriculture and food crisis
- (i) Public Health Challenges
- (j) Economic losses and social displacement
