

## Topic = Climate change:

Cause and consequences

## Outline

## I Introduction.

## Thesis statement

Climate changes due to the increase in human activities. However, changed climate ~~effected on~~ all human activities.

Very general  
Specify few variables

II Climate change as "scientific process"

Better to write overview

## III Causes of climate change.

A) Advancement in transportation and resulted more usage of fossil-fuels.

B) Advancement in nuclearization and resulted more usage of nuclear hot material.

C) Heavy industries producing modern products and resulted more emission of greenhouse gases.

D) Advancement in technology

Resulted more emission of heavy gases.

E) Artificial intelligence model in machinery required prepared

Use another word

and resulted more emission of CFC's.

F) Modern Pesticides in agriculture

cause polluted environmental

condition with emission of Green house  
Gases and methane.

G) Industrialized cities are producing

more energy and resulting, emitting

more ~~heat~~ <sup>CO<sub>2</sub></sup> gas in the atmosphere

which disturbing environmental condition.

#### iv The consequences of climate change.

A) Flooding due to melting of glaciars.

B) Smog due to emission of more gases.

C) Pandemic and epidemic decreases

Produce and effect on humans.

D) Infrastructural loss due to flooding.

E) Sea-level raise-up due to flooding

F) Agricultural loss due to flooding & smog.

G) Ozone-layer depletion occurs

and resulted harmful ultraviolet

radiations effects living organism on

the earth surface.

#### iv Conclusion.

Follow the structure

Write equal length sentences or  
phrases

Change in something may prove beneficial, but change in environmental condition is not fruitful for all the living organism on the earth surface. However, Climate Change is human not suitable for humans.

There are numerous definition of climate change but simply it is change in the environmental condition due to the increase ~~of~~ <sup>in</sup> the human activities.

Climate change effected all the activities of humans inspite of it. ~~Production~~ <sup>Rephrase the sentence</sup> ~~due to the human~~ activities. The causes of climate change are multiple, but the advancement of Artificial intelligence and technology, advancement in transportation, and the emission of green house gases are the main cause of climate change.

In addition to, nuclear proliferations, advancement in agriculture ~~sector~~ <sup>are</sup> emitting more gases which disturbing the environmental condition. In the ~~result~~ <sup>AB</sup> the climate changes

and effects on all human activities.

Climate change <sup>melts</sup> effects ~~glaciers~~ which

~~becomes~~ the source of flooding. Flooding

~~destroys~~ the ~~infrastructure~~ of the country

and increase the sea-level. In addition

~~to~~ Flooding destroys the agricultural

crops and human houses. Further ~~Climate~~

~~change~~ effects ozone layer which protecting

human from harmful ultraviolet radiations.

Summarizing, ~~Climate~~ <sup>Break into a new sentence</sup> ~~change~~ <sup>effects</sup>

~~all living organism on the other earth~~

surface.
