

# Classrooms Decide Future of a Nation

Hook →

Lack of only professional and vocational trainings do not reduce the efficiency of classrooms in deciding the future of a nation but also absence of modern tools and instruments in classrooms. The progress and fast advancements in today's world are dependent on these tools. They lack of availability of these tools have altered their role in human growth. Gallup Report 2023 also reported Pakistan in lowest rankings due to <sup>the</sup> lack of installation of digital tools. It is evident that no country can surpass or excel without adaptation of prerequisite instruments. Resultantly, growth of Pakistani nation crippled due to no modern necessities. In short, nations cannot grow and progress without contemporary commodities.

Integration of Artificial Intelligence (AI) and technology with education expands the efficiency of classrooms in national growth. They contributed significantly in learning and teaching tactics. Their role in wide-spread services of education sector is **well done kindly try to extend your ideas**. Kerala in India dominates highest literacy rate nationwide due to the integration of modern equipments. Case study. It drives the attention of policy makers towards the essence of Artificial Intelligence and technology in nation's prosperity. It is not just the luck of <sup>the</sup> people living in Kerala maintaining highest literacy rate but a proactive strategy of government. Finally, integration of AI and technology do not alone guarantee the prosperity of a country, but also vocational and professional trainings in education sectors.
