2.8: The world has witnessed

great changes in politics and political affairs

Case in point: Development of new concepts like representative democracy and indirect voting.

2.9: In the field of economics, significant changes and improvements occurred

Case in point: Development of various economic models like Socialism; Capitalism and hybrid model of economics.

3: Conclusion:

From the emergence of this universe until now, the world is constantly changing as the saying rightly goes on "Nothing is permanent except change". Indeed the only permanent and constant reality is the change itself. Humans have greatly progressed and witnessed change almost in every field of life be that cultural norms, education, Science and technology, administration, warfare technology and politics. The process of change is always continued and maybe something best today becomes outdated tomorrow and replaced by something much more better; therefore, it can be concluded that change is the only constant reality in human life.

Societal norms and customs were were very different some centuries ago, but as time

Passed people have witnessed change in these norms. For example, women public appearance and participation in public affairs was unimaginable, but today women are contributing in public affairs just as normally as men are doing. Similarly, previously in the Conservative Societies, women related problems like periods were considered taboo; however, today it is a normal thing to discuss. Thus, Societal Norms have changed with the passage of time.

Similar to Societal Norms, education systems of Societies have also significantly evolved and changed with the passing of time. For instance, classroom study is gradually shifting to online classes on platforms like "Zoom". Likewise, the modes of education have also changed from physical to online. Today, books and articles are available on the

Online Sites like "PDF Drive" and "ISSI" which people can easily access and read. That's why, it can be said that like societal norms, education system has also evolved and changed.

Additionally, as education system progressed and changed, it became more efficient and accessible to common people; therefore, the world witnessed great progress in technology and medical science. For instance, the deadly diseases and viruses that killed millions of people are curable today like Spanish flu and recently Coronavirus-2019. Other than these, the medical science greatly progressed in discovering antidotes of medical issues like cancer and others. Thus, it is clear that medical field has witnessed significant advancement with the passage of time.

like medical science, other branches

Science also progressed which has contributed in changing public perception about natural happenings. For instance, the ancient people in Greece believed that whenever thunder lightening happens it signifies that two gods are fighting; however, today Science has busted this myth and today people believe more on the Scientific explanation than these myths. Similarly, people's perceptions about other happenings have also changed attributed to the advancement of Science.

Just like the medical and other sciences, humans have significantly contributed to progress in warfare technology. For example, some decades ago nuclear bombs and other weapons were only method of warfare; however, today, the means of warfare have significantly changed with drones and cyber attacks. Thus, this again illustrates that change is happening in every field like medical Science and others.

Other than medical technology and other Sciences, humans have also witnessed advancement in the means of Communication. To illustrate this, the advancement in means of Communications like phones and internet and Social Sites which made communication much more easier and smoother in the modern era. Previously, people had to rely on letters and post offices for communication, but things have changed and messages are sent within seconds and even lesser. Therefore it is safe to say that humans have progressed and witnessed change in the field of Communication.

In addition to above mentioned factors, people have also greatly progressed in the field of administration. In previous times, management of areas was very difficult; however, with the advancement of

technology an administrator can easily manage and monitor state affairs sitting thousand kilo meters away.

A recent example clearly illustrate this when Shahbaz Sharif, Prime Minister of Pakistan, was on an international visit, but for passing 27th Constitutional Amendment Cabinet meeting and PM's approval came immediately. So PM

Minister chaired a meeting via Zoom call and thus, 27th Amendment got his approval. This shows that in modern era, administration has become very easy.

Like administration and administrative strategies, political politics and political strategies have also changed. for instance, in the ~~Ancient Greece~~ Ancient Greece, there was only direct democracy and everyone was not entitled to vote; however, as time passed, today all democratic countries allowed

every adult to vote and participate in public affairs. Similarly, Ancient democracies were direct, but modern democratic democracies are almost all indirect. Thus, illustrating that like any other field in human life politics has also changed with the passage of time.

As a significant <sup>have</sup> field in human life, economics has also greatly changed with the passage of time. In previous time tax collection was mostly direct and misusage of tax money was easier; however, today there is also indirect taxation and significant checks are imposed to discourage. Besides taxation, economic systems have also evolved like emergence of Capitalism, Socialism, etc. <sup>plz avoid writing in such grammar as it conveys confusing statements</sup> In other mentioned fields, economics have also witnessed great change in human life.

To Sum up, it is fair enough to say that change is the only reality in human life. Almost every field concerning human life, has evolved and changed with the passage of time. This process of change is still continued further and the above discussed field may get much more changed as time goes on. Thus, it is true that nothing is permanent except change.
