

Climate Change : Causes and Consequences

Outline

I. Introduction

a. Hook

b. Background

c. Thesis Statement

work on your language
Change ~~are~~ mainly ~~caused~~
by natural, economical, anthro-
pogenic, population growth and
weak governance, and result
in far-reaching environmental, eco-
nomic, ~~social~~ and political
consequences.

II. Causes OF Climate Change

1. Natural Causes

a. Volcanic activities

b. Solar radiation variations

c. Greenhouse effect

2. Economical Causes

a. Industrialization

b. Agricultural Practices

3. Anthropogenic Causes

- a. Burning of fossil fuels
- b. Deforestation
- c. Transportation sector

4. Population Growth

- a. Increased waste
- b. Pollution
- c. Overconsumption of natural resources

5. Weak Governance

- a. Poor implementation of Climate policies
- b. Lack of International Compliance

III. Consequences OF Climate Change

1. Environmental

- a. Global Warming
- b. Changing in weather patterns
- c. Desertification
- d. Sea-level rise
- e. Biodiversity Loss

2. Economic

- a. Agricultural Losses
- b. Infrastructure damage
- c. Increased poverty

3. Social

- a. Food insecurity
- b. Water scarcity
- c. Health hazards

4. Political

- a. National security threats
- b. Resource conflicts
- c. International Tensions

IV. Case Study: Impact on Pakistan

- Glacial melting and water insecurity
- Frequent floods
- Threat to agriculture and economy

V. Recommendations

- Renewable energy transition
- Reforestation
- Water management
- Global Climate Cooperation
- Climate resilient agriculture

try to use more mature word to make it more clear in meaning

VI. Conclusion
