

Outline is very surface level
Lacks thorough exploration and
Nuances related to AI and its challenges

Artificial Intelligence and the challenges it has created

Outline

Use separate blue or black pen for
highlighting main headings.

1. Introduction

Thesis Statement: Artificial Intellig-

ence has created numerous
challenges to mankind through
privacy loss, exploitation of information,
job displacement, loss of human
creativity in literature, and widening
economic inequality.

2. Understanding Artificial Intelligence

3. The challenges Artificial Intelligence has created;

Two separate things

3.1 Loss of privacy and deep-fake

a. data harvesting by corporations
and business entities

3.2 Displacement of certain jobs

a. driverless cars may eliminate
million of driving jobs

b. replacing journalism, medicine
and reception jobs

Challenge? 3.3 Acceleration of global arm race

a. US, China and Russia competing
aggressively

3.4 Widening economic inequality

a. Views of Noah Hrai

3.5 Surpassing human's creativity in the field of medicine

a. Harvard University Report

No need to mention the fields

3.6 Diminishing pupil's own understanding of assignments and quizzes - diminishing critical thinking

The challenge should not be limited to a particular segment of society

3.7 Algorithms bias against minorities in the USA

Don't mention the name of state in the point

3.8 AI could manipulate the course of history

a. Reference from Nexus' book

3.9 AI could create digital divide

a. Access to education and resources

3.10 Market Volatility

a. Algorithms trading could bring another financial crisis.

4. A few considerations to mitigate the challenges that AI has created.

Too generic and vague

4.1 Regulation of AI

a. Example of European Union

4.2 Legal framework for and global collaboration on AI

ethical use required

5. Pakistan's AI 2025 Policy - an overview

6. Conclusion

Expression is immature

From science fiction nightmares to everyday reality, Artificial Intelligence (AI) has moved beyond the pages of novel and the screens of Hollywood blockbusters. Today, AI is not about futuristic robots or dystopian machines - it is about algorithms that recommend news, manage finances, and even decide what deserves in a restaurant. AI is everywhere: smartphones, self-driving cars, healthcare diagnostics, and military automated drones. AI is a scientific field that uses computers to store data and respond to robotics or machines for certain commands based on the stored data. It is also called machine intelligence. It has progressed so rapidly in the few years that it has created challenges to mankind. AI is going to surpass humans. This elucidates that AI has affected human privacy and ethical dilemma. AI has replaced certain professional jobs - risking millions jobless. It has also accelerated global arm race amongst major powers. AI has assaulted human's creativity and critical analysis in the field of

Don't define terms in the introduction. Also the definition is not academic and properly sourced.

Sentence structure

Focus on selecting proper words
The expression should always be formal
And academic. Also the breakdown of topic
Lacks thorough analysis.

education. In other words, it has
created numerous challenges to
humanity through ethical dilemmas,
misinformation, job displacement, loss
of human creativity, and digital divide.

AI has created multiple challenges for humans,
One of which is invasion of privacy

^{firstly} AI has created a serious
challenge through its invasion of
human privacy. The data of the
individuals have been exploited.
It is easy and ~~an~~ to trace and
analyze each move of a person,
using installed cameras at every
corner of the city and facial recog-
nition algorithms. In the USA, predictive
policing so AI-backed softwares
has been criticized for targeting
women and ethnic group. Tech giants
collect massive amount of data to
train their systems, often without
consent, turning citizens into subjects
of surveillance capitalism. Government
also exploit AI for mass monitoring
and threatening individual freedom.
For example, Cambridge Analytica used
information from 50 million Facebook users
to impact the results of the 2016
U.S. presidential elections. Briefly, AI
has created challenges to human
privacy.

No role of AI
discussed.
