Climate Change: Causes and Consequences.

I) Introduction:

- Hook
- Background
- Thesis Statement:-

~~Climate change is happening faster because of human actions like burning fossil fuels and cutting down trees. This causes problems such as pollution, volcanic eruptions, stronger storms and shortage of water etc. It is very important to act quickly to protect our planet and future.~~

II) Climate change: Causes (Anthropogenic/Manmade):

- ⇒ Burning fossil fuels.
- ⇒ Industrial processes
- ⇒ Deforestation.
- ⇒ Agricultural processes.

III) Causes (Natural):
→ Volcanic eruptions.

IV) Consequences:
→ Rising temperature.
→ Melting ice.
→ Extreme weather

V) Social and Economic Consequences:
→ Health risks/impacts.
→ Water scarcity.
→ Food insecurity.
→ Economic impacts.

plz write more
meaningful phrases

VI) Solutions of Climate Changes
→ Change human behavior
i) Explore renewable energy sources.
ii) Reduce burning of fossil fuels
→ Reforestation.

→ Conclusion:
