

climate changes : Causes & Consequences

Outline

1- Introduction

1.1 - Hook

1.2 - Background

1.3 Thesis Statement: The Earth is

experiencing a fever, with rising temperatures and increasingly erratic weather patterns.

~~There are many reasons for climate change. Some of the reasons are deforestations, green house effect, glaciers melting, rise of sea level, less rain. These are also outcome for climate change which are hot temperature, ocean acidification, impacts on ecosystem and human life.~~

Too long for a thesis statement. Should not be more than 30-40 words.

Proper formal structure of phrases and sentences.

2- climate changes Causes

2.1 - deforestations

a) CO₂ releases

b) loss of Carbon sink

2.2 - green house effect

Too broad. Overlaps with everything else

a) human activities eg. Burning fossil fuel for energy

b) Industry

All subheadings must be in the form of self-explanatory phrases or short sentences.

2.3 - glaciers melting

a) flooding

b) water scarcity

2.3 onwards are effects not causes of climate change

2.4 - rise of sea level

2.5 - less rain

a) drought condition

b) extreme weather

No consistent structure throughout the outline. Some headings have one tertiary headings some don't have any

3 - Consequences of climate change -

3.1 - hot temperature

a) heat waves

b) Infrastructure damage

c) food insecurity

d) health issues

These are not supporting points of hot temperatures

3.2 - ocean acidification

3.3 - Impact on ecosystem and on human life

a) habitat losses

b) displacing human life

c) health risk of biodiversity
