

(ASSIGNMENT-1) (Batch: 87)

=> Only thesis statement on (climate change causes and consequences)

1:- Introduction

Thesis Statement:-

Climate change is caused by factors such as deforestation, fossil fuel consumption, excessive use of electricity, transportation, urbanization, and it has significant impacts on the environment and human life.

Causes:-

1. Deforestation:-

- a) CO₂ levels increase.
- b) The temperature rises.
- c) Biodiversity loss
- d) Soil erosion

2. Fossil fuel Consumption:-

- a) Respiratory problems
- b) Health issues
- c) Releases CO₂
- d) Extreme weather events
- e) Economic and Health Costs

3) Transportation:-

- a) Deforestation for roads reduce carbon absorption.
- b) Creating urban heat islands.
- c) Release gases at high altitudes.

4) Urbanization:-

- a) Leading to higher energy use and emissions
- b) Higher pollution
- c) Methane emission

5) Population:-

- a) Energy demand
- b) Food production
- c) Waste generation

6) Waste Mismanagement:-

- a) Methane Emissions from landfills.
- b) Open burning of waste
- c) Sewage and wastewater
- d) Lack of recycling

7) Green House Effect:-

- a) More heat is absorbed
- b) Factories and cities emit heat and gases
- c) Fewer trees to absorb CO_2

2) Consequences:-

1) Human Migration:-

- a) People are forced to leave flooded or drought-affected areas.

Separate arguments

causing social and political challenges

Discuss in separate

2) Economic Losses:-

- a) Damage to infrastructure
- b) loss of crops
- c) National economies

overlaps with
urbanisation &
transportation

overlaps
everything

write direct impact
first

3) Health issues:-

- a) Respiratory problems
- b) Vector-borne diseases
- c) Mental Health Effects

4) Melting Glaciers and Rising Sea Levels:-

- a) Leading to flooding in coastal areas.
- b) Displacement of people.
- c) Loss of homes
- d) Loss of habitats

Separate arguments
should be discussed in
separate paragraphs.
