

Artificial Intelligence: The Death of Creativity

Outline -

1- Introduction

2 - How Artificial Intelligence affecting on creativity

2a - Overdependence on AI prepared data.

2b - ~~Reducing the thinking~~ Analytical capacity.

2c - Student depending on AI to fulfill the the assigned task.

2d - Reducing the problem solving skill in industry.

2e - Risk of cultural and intellectual norms.

2f - Over dependence of AI in medical for diagnosing the disease.

2g- Increasing the cyber threat and require the creativity to counter.

2h- If weapon control by AI, lack of emotional and intellectual gap will exist.

2i- In Commercial site use of AI is profit, not the innovation.

2j- Deepfakes and AI are reducing Authenticity

2k- AI affecting on Mental health.

3 - How can AI use effectively and promote the creativity in daily life.

3a- Promoting AI collaboration with human work instead of replacement.

3b- Monitor using of AI in Creative industry Sector

3c- Including creativity work in curriculum

3d- Implementing AI Content regulation policies.

3e- Introducing ethical guideline for the use of AI in industries.

2f- Encouraging Research and Development environment

2g- Supporting local and cultural art initiatives.

4 - Conclusion

Artificial Intelligence has rapidly moved from scientific laboratories to human life. It is including every part of life. **it includes** using AI in study, doctors are using in medical and so on. But with the positive aspects it is affecting on creativity. The main difference between human and AI is

~~Creativity~~. AI is working on Algorithm that is setup by human. It is not generating new ideas as human can do it. But due to over dependence on AI human creativity is ~~claming~~. Human ^{is} lazy by nature. when every solution is available on one click his creativity is shrinking. People ^{do} not try to find the solution through brain storming. And problem solving skill is reducing in industries. AI can help us in work but it can not take the place of human original thinking. Some part of society is using misuse, the cases of deepfakes and cyber security is increasing, and they using Creativity in wrong way. The over useage of AI affecting on mental health. If converge the whole debate, Artificial intelligence ^{pls work on language} ~~reducing the creativity of human,~~ because its providing the fast and easy solutions. The analytical Reasoning and diversity of human thinking are affecting, and originality of new ideas is suppressing. ^{we} need the balance usage of AI.
