plz work on your grammar your
Three decades of Climate diplomacy — have
first sentence is not clear in
no bridged between what science demands and
stance what states deliver. Pakistan is one of
top most vulnerable country that affected
most due to climate change. But after

all the reasons, Pakistan is preparing to manage the Climate Change problems. Pakistan Strengthening the PDMA & NDMA units. And using the latest Radar technology to determine the upcoming threats. Furthermore, implementing the long term projects that will help to reduce the carbon emission. And working on ten billion trees Tsunami project. And Shifting on Electric Vechile to reduce the carbon emission. Pakistan is shifting on Renewable mode of energy, this project is hard to implement but it will gives the long terms results. But Pakistan is developing country, and its facing the shortage the of funds to achieve the target. ~~if and~~ converge the whole debate, Pakistan is working on models that will work against the Climate Change. But existing profile of Pakistan preparedness to control climat Change is not sufficient, Pakistan needs to do more & build the Climate resistant infrastructure.
