

Climate Change: Causes and Consequences

Introduction??

The first heading in outline is always introduction.

1. Thesis Statement: The major causes behind climate change are: burning of fossil fuels resulting in greenhouse gas emissions, deforestation, industrialization and urbanization, agricultural practices and unsustainable human consumption. These causes results in these consequences such as: extreme weather events, water insecurity, agricultural and food crisis, public health challenges, economic losses and social displacement.

Too long for a thesis statement. Should not be more than 30-40 words.

2. Causes of Climate Change:

(a) Burning of fossil fuels

(b) Deforestation

(c) Industrialization & urbanization

(d) Agriculture practices and unsustainable human consumption

(e) Unsustainable human consumption

All subheadings must be in the form of self-explanatory phrases or short sentences.

Urbanisation and industrialisation are separate arguments.

3. Consequences ^{Of} results in Climate Change:

Restart the numbering from a for every main heading

(f) Extreme weather events

(g) Water insecurity

Separate arguments

(h) Agriculture and food crisis

(i) Public Health Challenges

Too broad

(j) Economic losses and social displacement

Too broad

Conclusion???
