

## Introduction

“Climate change is no longer a distant prophecy; it is a daily weather of our lives” — Barack Obama

use marker for this quote and leave a line below then start

Climate change has moved from a scientific warning to a lived reality. What was once discussed in research papers and conferences, is now clearly visible in daily life through rising temperatures, floods, draughts, and heatwaves.

It is not a problem merely of one country alone; rather, it is a global issue that affects the entire world. Climate change does not respect national borders, and actions in one part of the world influence the climate everywhere. No nation, whether developed or developing, can remain untouched by its impacts.

In Pakistan, this reality is evident in the form of devastating floods, heatwaves, water shortages, and damage to agriculture. Despite contributing less than one percent to global greenhouse emissions, Pakistan is facing some of the most severe and disproportionate impacts of climate change, highlighting the issue of climate injustice.
