

Is it too late for climate action?

I Introduction

The world has witnessed deleterious effects of climate change but it is certainly not too late to take climate action. With increasing awareness, shift towards renewable resources and chance to protect earth, now is the time to transform rhetoric to concrete action.

II It is not too late to take climate action

1. Best time to take action as it has become a globally recognized issue
2. States are willing and have joined hands for climate action
3. Global target of 2°C of temperature can be achieved
4. It is not too late to save glaciers, reservoirs of water for life on earth.
5. It is still time to save ozone layer, providing protection to humans.

6. Shifting trends towards renewable sources of energy is testament to fact that it is not late for climate action.

7. With advent of AI, it is best time to take action as it could highly aid in action.

8. It is not late to save coastal population.

9. It would never be too late to avoid displacement of people by taking action.

10. Antarctica wild life could still be saved by climate action.

III Current trends in climate action

1. Finance pledged in COP 29 by global north for climate action

2. Solar panel installation has significantly increased in past years

3. Emergence of electric vehicles replacing traditional automobiles

IV Conclusion
