

Artificial Intelligence: a dangerous self-serving fallacy

Outline

Introduction:

Artificial Intelligence is a dangerous self-serving fallacy:

- i) job displacement resulting into increased ratio of unemployment.
- ii) Use of AI weapons in warfare leading towards violation of international law through indiscriminate killing.
- iii) Violations of individual's Privacy through surveillance tools.
- iv) More consumption of energy at AI centers creating environmental concerns.
- v) Promoting gender inequality through gender biased algorithm.
- vi) Increased trend of Deepfake resulting into uncertainties.
- vii) AI-generated content spreading

misinformation and disinformation.

viii) Overreliance on AI reducing the critical thinking abilities of individuals.

ix) Stakeholders of AI exploiting data for their interest.

x) AI imperialism by powerful nations to influence and coerce weaker nations.

xi) Increased use of AI-powered virtual assistance can lead to social isolation.

xii) Vulnerable to cyber attacks, which could compromise sensitive information and disrupt critical infrastructure.

xiii) Manipulating public opinion through echo chambers.

Conclusion:
