## Impacts of Climate Change On Global Security

### Outline

#### I- Introduction

#### II- Debunking the term Climate Change

#### III- Impact of Climate Change on global Security:

A. Climate Change is creating mistrust in universal agreements due to its hoaxing changes in weather pattern

B. Hot/Extremely hot weather is threatening international security promises for land erosion

B. Burning environment/atmosphere is reducing effectiveness of international agreements against droughts.

D. Rising temperature is deteriorating supranational food security commitments

E. Heat waves are impacting the international commitments for healthy life

F. Extreme weather is threatening global residential assurances

G. High temperature is haunting the world promises for forest security

H. Increasing environmental temperature is terrifying the world biodiversity protection commitments

I. Rising temperature is creating challenges for universal promises for against glacial retreat

J. Boiling Earth is fearing the universal commitments for prosperous future

#### IV. Suggested measures against dangerous impacts of climate change on global security.

A. Sincerity and determination in international agreements

B. Usage of technological tools for climate change mitigation

C. Reduction in over usage of hydrocarbons by shifting to green energy

## V. Conclusion

Essay

You dreamed of living in Mars.

"You dreamed of living in peace, you wished to create a new world. You forgot my beauty that I used to be, you destroyed my environment. You did not stop these, you killed those species that used to live above me." The mother Earth was crying out to humans. Undoubtedly, human activities had caused the climate change and still it is continuously destroying the atmosphere of Earth. As a result, this climate change has is impacting not only on Earth's atmosphere but also on global security of human being. The rising temperature is creating a hoarding trust between human universal commitments against the changing weather pattern. This is then resulting into the mistrust among nations globally due to which the agreement's implementation becomes a utopia. Similarly, hot weather is threatening the international community to fulfill the promises against land erosion which is destroying the land fertility and crops productivity. Moreover, the impacts of climate change does not stop there, it is also increasing the atmospheric temperature which is reducing the effectiveness of international agreements against rising droughts on mother Earth causing the impacts of

Climate change, the list goes beyond because it has become a global non-traditional security threat. Therefore, it is impacting the whole planet's security woosely.

Before discussing the impacts of climate change on global security, it is imperative to debunk the climate change. Climate change is ~~human~~ a non-traditional security threat to not only human life but also all living things. This it is caused by rising temperature, due to pollution, increasing concentration of green house gases (GHGs) and many other human based activities. It causes the most disastrous floods, hurricanes, cyclones and typhoons. Moreover, it also causes the heat waves which impact human life. Climate change is also a weather pattern change in the world.
