

"Human Inventions move the Societies backward"

1. Introduction

2

2. An Overview of backward primitive Societies and comparing them with the modern tech-oriented world

3. How human inventions move the societies backward:

1) AI-inclusion leads to death of creativity

2) Manual communication affected due to virtual networking.

3) Modern machinery usage hinders the physical activity.

4) Technology usage causing health risks.

5) Modern weapons: a source of mass destructions rather than maintaining peace.

6) Media increasing misinformation in place of beneficial information

→ Social media platforms as a threat to cyber security.

4. How these inventions help in progress of societies:

1) Modern methods of agriculture increase crop yields.

2) Industrialization is beneficial for wealth generations.

3) Save time and Energy.

4) Raise awareness on the current happenings.

5. How to make these innovations more effective for the progress of humans:

i) Reduce over-reliance

ii) Strict management of these inventions

iii) More public-govt. interactions - improving quality of life.

iv) Ensure security of citizens.

6. Conclusion.

Man invented tools to benefit himself, now he is cursing the same tools to let him live peacefully. Human beings invented multiple tools to make progress in the society. They invented different technological equipments, tools and machines that could provide maximum output to people with minimum input. However, these devices and equipments are now derailing the benefits which man wants to get through them. Human inventions are slowly and gradually moving societies backward. This is due to the downfall that the nations are experiencing due to these inventions and discoveries. Societies pave way for success in the world and progress when the socio-economic conditions are sustainable, human development is ^{directed} on a positive note, and living conditions are supportive for the public. At present, the modern resources have adversely impa-

cted these indicators. The present-day inventions have including Artificial Intelligence, social media and modern gadgets have hypnotized mankind, causing death of creativity. They also affect the manual communication and individual choices. Whereas Nevertheless, they also prove to be advantageous for humans. The tools and weapons help humans for new and novel discoveries, and ^{raising} awareness on any contemporary issue across the world. In a nutshell, human inventions, although effective in many respects, are pushing the societies towards their downfall. This is due to the over-reliance of humans on these inventions, which ultimately prove to be destructive for ~~the~~ nations.
