

Expanding information technology: a curse or blessing

Brainstorming

blessing

- Telecommunication
- Easy life of human
- Travel distance in min
- Industrialization
- Developmental growth
- Economy increase
- Poverty decrease
- Improve social life

curse

- World war II
- Climate change
- Deforestation/Industrialization
- Cyclones
- Cyberbullying
- Danger for safety and security
- Dependency
- Trade war

Thesis: Expanding information technology no doubt has proved so much beneficial to world providing us with more made new world but more than ^{any of} positive effect it give is ~~most~~ ^{is} ~~not~~ ^{not} ~~expanding~~ ^{expanding} information technology is just like a curse. ~~It increases~~ ^{It increases} ~~creativity~~ ^{creativity} ~~climate~~ ^{climate} ~~has~~ ^{has} ~~cyberbul~~ ^{cyberbul}.

- Economic growth
 - Provide jobs
 - Poverty decrease
 - Industrialization
- Social life benefit
 - Telecommunication
 - Distance decrease

→ Neg impacts of IT on global level

- World war II - Japan
- Climate Change - Deforestation
- Floods / Cyclones / wildfires

→ Neg impacts of expanding IT on Individual's life

- Cyberbullying
- Dependency
- less creativity
- ~~AI~~ ^{AI} ~~jobless~~ ^{jobless}

Outline:

Introduction:

Thesis statement: Expanding information technology is curse more than being blessing. It is ~~curse~~ affecting ~~from~~ ^{on} individual's life ~~as well as~~ ^{as well as} ~~global~~ ^{global} levels. It is reason of cyberbullying, climate change, economic crisis -

Define the term "Information Technology"

It affected the world on Global level.

USA's ~~attack~~ ^{nuclear} attack on Japan (WWII)

- Ⓚ Nuclear War's threat
- Ⓚ Climate change

(Argument)

① Threat to Countries Security ~~the~~ theory from Satellite / AI / ...
 Robots/AI as a threat to World
 - Effects of Expanding of Information Technology on individuals life. (Argument)

- ① Cyberbullying increased due to IT
- ② Dependency on Information Technology is affecting Coexistence of humans

Expected
 outer
 argument

Information technology has provided world many ~~benefits~~ provided concept of Industrialization, participated on developmental growth of countries world.

- ① Industrialization gave ~~new~~ ~~grow~~ enormous growth to world's economy
- ② ~~Co~~ Power IT has ~~comprised~~ helped covered humans to cover these long distances, + Telecommunication made humans life easy.

+
 outal

Despite of providing the developmental growth Development caused by IT will become the reason of end of world.

- ① Industrialization become the biggest reason to effect climate change
- ② Increased technology has also ~~to~~ increased terrorism through telecommunication and by using some transport

Conclusion:

- - Before adaptation of Information Technology world was living with slower communication, and made doors to doors interactions. IT has helped them to make long distances smaller. IT made faster communication and many other development, on the basis of these developments. Some people believe Expanding information technology is blessing but they are highly ignoring its negative impacts on World. Expanding Information Technology is clearly a curse more than blessing. It is ~~the~~ becoming slowly the cause of end of World. IT is the reason behind increasing climate change, nuclear wars, environmental impacts.

- Information technology is a broad term that involves the use of technology to communicate, transfer data and process information. Information technology does not limit itself with the analytics, Automation, Artificial intelligence it is ~~an~~ working communication, ~~and~~ industrialization is biggest achievement of information technology which change the world.

- - Information technology ~~is~~ the biggest reason behind nuclear war. ~~to~~ In WWII when Japan ~~is~~ was not ready to surrender and USA at that was making nuclear weapons secretly and then they found that nuclear attack ~~at~~ would make Japan to surrender and USA attacked Japan's city Hiroshima 80000 plus people had died in that attack. USA ~~admitted~~ admitted after that they will never again go for nuclear war ~~they~~.

had no idea that nuclear bomb would cause so much damage. That is all possible just because of Information technology some people believe that nuclear weapons are the source of deterrence countries should focus nuclear weapons but they forget that if some are ignoring that fact that misunderstanding just like cuban crises can cause them to go through nuclear war again hence Every countries must withdraw from ~~their~~ their nuclear weapon so that peace can achieve.

- Expanding information has severely effected on climate change. When world felt some diseases 2024 was experienced as hottest year on the record - climate changes has effecting environment has also causing floods, cyclones, and smog. It happened due to increasing of green house gases in environment and they are due to transport use which releases CO_2 , Deforestation also causing effecting, Wildfires which done by localer for getting coal. Some people ~~are not~~ ^{believe} considering that proper use of information technology with proper management will not cause effect on our environment such as use of electrical buses which are not releasing CO_2 but in ~~on real ground it will~~ will become expensive to use electrical or they believe that industries must follow use those machines which will not release CO_2 . On real ground it will become expensive for ~~world~~ ^{all} industries to use these machines as that electrical transport is cost effectively so it will become difficult for everyone to

satellites, AI, Robots are the biggest threat to security and safety on personal/individual's level as well as on country's level. Recently unstoppable modification of AI tools shows that in coming years AI will take jobs of people and AI can perform better than human but it is ultimately showing how it is the biggest threat to human's security you can take anyone's voice and can make anyone's video by using their photo. Some people believe that inventions of these technologies such as AI, satellites are only for making human's life easy. Satellites invention are only for the purpose of self security but Satellites can be used as spy as India recently in 2023 successfully Chandrayaan-3 launched on moon which is absolutely biggest success for India but it must be the biggest nightmare for Pakistan. because Yes, India and Pakistan both are the nuclear countries but now India has developed in technology. India can use these satellites as spy or if whenever the India and Pakistan's relations get worse India has will be dominant at that time it proves that these technologies are danger for security of countries.

- In preceding paragraphs, discussed the impacts of expanding information on Global now in following paragraphs will

technology on individual's life.

- Information technology has increased cyber-bullying in society which is highly impacting on mental health of the people. Depression has increased among people when these social networks increased such as Instagram, Twitter where most of criticism happened. Some people believe that these social networks just as Twitter, YouTube or many others are beneficial more than harmful they believe that it totally depends on users that how they are using them. Yes, there is no doubt it totally depends on the users that is the biggest problem because people enjoy to mock each other, they love to make fun of other. These social networks simply destroying mental health of our youth.

- People are highly dependent on information technology which is destroying the creativity of people's minds. Education system is destroying due to high use of information technologies. Some people believe that information technology has improved educational systems but they are ignoring that young youth is using that information technology to do homeworks, assignments. It is new research that AI is highly used by students for getting doing their assignments. Students are using their mind but are copying AI. During Covid students whose names are taken only they were copying

by using that technology and now it is effecting and destroying creativity.

- In preceding paragraphs discussed about the negative impacts of expanding information technology now in following will discuss about some positive impacts of expanding information technology.

- Industrialization is the biggest event of information technology which enormously increased economy of the world. Industrialization make every thing easy humans. China has been developed due to their fast growth of country.

- IT has ~~helped~~ invented many things like telecommunication, transports facilities which made human's life easy. It covered helped humans to cover several kilometers in hours. It's telecommunication has made interactions so much easy in world.

- In preceding paragraphs discussed about positive impact of expanding information technology now in following will discuss the response to counter arguments.

- No doubt, Industrialization has provided many benefits to human but at the same time it is causing climate change, at the same time it is destroying environment.

- Telecommunication and easy access to transport not also increased terrorism in world because it become easy for

for them to cover distances and also they planned their attacks by using that information technology.

E — It is proved that Expanding information technology is curse more than being blessings. It is increasing impacting on our environment causing climate change, & the reason of economic, political and nuclear war among different countries, also proved the biggest threat to security and safety of human being. Expanding information technology should be stopped and more focused must be payed on human's behaviour and moral education to make this world the worth place where one can live. "Information technology which is ~~information~~ information used in tuition is good but expand that information will prove harmful to humans."
