

Climate Change.

Outline

(1) Introduction

- (a) Brief Overview of Climate Change.
- (b) Importance of addressing the issue.
- (c) Thesis Statement & Explore, Causes, Effect and Solution to mitigate this crisis.

(2) Causes of Climate Change:

- (a) Increasing green house gases.
- (b) Burning of Fossil fuel.
- (c) USE of transport :- Vehicle emission
- (d) Deforestation: Cutting of trees.
- (e) Agriculture activities
 - ↳ Excessive use of Inorganic fertilizer
- (f) Life Stock Farming and methane emission

(3) Effect of Climate Change

- (a) Rising earth temperature and polar ice melting.
- (b) Impact on human health
 - ↳ Skin disease
 - ↳ Cardiovascular diseases-
- (c) Social and Economic challenges
 - ↳ poverty
 - ↳ famine
- (d) Sea level rise Threats of Coastline
 - ↳ Ocean acidification
 - ↳ Death of fishes.

(4) Solution:

- (a) Reforestation and afforestation effect
- (b) Introduce renewable sources
 - ↳ solar wind and thermal energy
- (c) ↳ planting more green vegetables.
- (d) ↳ walk, cycle or take public transport.

(5) Conclusion.

Climate change is an alarming global phenomena that poses several threats to our planet. The rapid increase in green house gases, primarily, driven by anthropogenic activities has significantly disturbed the earth climate, resulting in rising temperature, weather extreme, melting polar ice cap and biodiversity move towards endanger. Addressing this devastating situation requires immediate and collective action to combat its effect and secure sustainable environment for our future generations.
